CBM Mac rival

COMMODORE will now go ahead with its plans to launch a rival for Apple's Macintosh in mid-1985, despite a continuing legal battle with Atari over the ownership of the technology involved.

The Commodore machine is based on the Lorraine — a 256K, 32-bit 68000-based micro — developed by Amiga, a US company which Commodore has been in the process of acquiring for some months. Commodore's purchase of Amiga was completed last week.

The future of the new Commodore machine had been in some doubt since Atari sued Amiga earlier in the year in a dispute over chips — used in the Lorraine — developed by Amiga for Atari. Atari claimed that Amiga did not complete the contract and then offered the chips for sale to third parties.

Now there is confusion over how the sale of Amiga to Commodore will affect the law suit. Steven Greenberg of

Advance — IBM takes action

COMPUTER giant IBM has taken action regarding the Advance 86a and B IBM-compatible micros.

Discussion between Ferranti, manufacturers of the Advance machines, and IBM have been going on for some time, regarding the Rom chips used in the Advance.

IBM claimed that the Advance Rom is a 90% direct copy of the Rom developed by IBM for its PC range. Now an agreement has been reached between the companies involved. A spokeswoman for IBM said, "IBM has concluded that a program in the Advance's Rom is an unauthorised copy of the basic input/output system on the IBM PC. Having been informed of the infringement, Ferranti, Advance and W H Smith the distributors, have all agreed to cease infringements." It now seems likely Advance will alter the 86 micros' Rom chip.

At £1500, the Advance 86b undercuts the basic IBM-PC by nearly £1000, while the 86a sells for just £399. The Advance's 8086 processor runs up to 40% faster than the PC's 8088 chip.

Atari plans up-market 800 XL micro

ATARI is to launch a new 128K version of its 800XL computer, as well as new 16- and 32-bit micros, in its renewed assault on the micro market.

"The 800XL, now selling at £169, will be the figurehead of the 8-bit range, and we will also be producing a 128K machine in this series," confirmed Simon Westbrook, Atari Corporation (UK)'s managing director.

Simon Westbrook

"Then we will be introducing 16-bit and 32-bit machines, as talked about by Sam Tramiel earlier this year, which will involve much superior technology. Software for these will be both for business and domestic purposes." These up-market machines are expected to be 68000 processor based.

Atari is planning to offer a range of hard disc units with the more sophisticated machines, up to an IBM-compatible level. The company will also continue to support the lower, end of the market.

View

Last week one amateur Commodore 64 'hacker' succeeded where our government has so far failed. He lifted the exchange rate to $50 to the pound.

Actually what he did was to use his modem to break into the *Financial Times*' reserved pages on the Prestel database and change the information displayed on the system as a joke. He also, while he was at it, gained access to the private mail Prestel area used by Prince Philip.

break in — apparently without too much difficulty — is considerably embarrassing for Prestel (and just when Prestel bashing seemed to be going out of style, too), especially as Prestel has recently embarked on a campaign to persuade big companies to take system space on which to store their own confidential business information.

Under this government's controversial Data Protection Act it is the responsibility of each database to ensure that its confidential information on individuals is kept as secure as possible. Anyone whose personal details are wrongfully disclosed can go to court to claim damages against the data provider. Taking action against the 'hacker is not easy, however, under present law.

It must only be a question of time now before here are professional hackers — experts who, for a fee, undertake to pick open data files as directed and pull out financial data, police records or people's credit ratings and political allegiances.

There should be big fines imposed for such 'professional' hacking. And databases carrying private information on individuals should evolve systems to detect if an unauthorised access to the system has been made.

Computer Trade Association Magazine of the Year

Here John did you know

Pyjamarama

is better than Jet Set Willy?

Who says so?

Computer and Video Games

It would be unfair to compare this game with Jet Set Willy but as people will inevitably do this, I'd like to say I think it is better. Here at C&VG we liked it so much **that we are sticking it in our Hall of Fame.**

Crash

Pyjamarama has some of the best animation and realistic graphics I have ever seen. Pyjamarama is unbeatable.

Personal Computer News

Pyjamarama has what is probably the most stunning graphics you are likely to see on a Spectrum. Pyjamarama is probably one of the best ever games released for the Spectrum.

Personal Computer Games

Game of the Month
It's not just the graphics, although these are outstanding. **The real point about Pyjamarama is that it's the first Arcade Adventure which is a real adventure.** Coupled with the games superb graphics and easy playability means that most people will fall in love with it straight away.

So now you know don't ya

Spectrum 48K

Mac rival

continued from page 1

Commodore US commented last week: "All the Atari lawsuit has done is prevent Amiga from licensing its chip technology to any third party — in its sale to Commodore it is not doing that, and the suit makes no difference.

"We will certainly be releasing a machine based on Amiga's micro under the Commodore name. A date has not been announced yet, but it will probably be some time in the second quarter of 1985."

Until Commodore's purchase of Amiga, Atari was hoping that its lawsuit would prevent Commodore from releasing the machine.

Rocky Horror Picture Show game from CRL

CRL, the company which has recently released games based on *War of the Worlds*, *Terrahawks* and *The Magic Roundabout*, is negotiating for a deal to base a computer game on *The Rocky Horror Show*.

"We still have to finalise the deal, but everything is going very smoothly," said CRL's managing director Clement Chambers. "We'll be basing the game around the strange environments in the stage show, with the emphasis on graphical presentation, rather than on the elements of dubious taste in the show itself.

Clement Chambers

"I'm hoping the game will be out in the middle of next year. We'll definitely be doing Commodore and Spectrum versions, and as many others machines as we can manage."

More news on page 8

Sinclair portable

SINCLAIR is developing a new portable computer, based on the Spectrum technology.

The machine, which could be available by mid-1985, will be fully software compatable with the existing Spectrum and Spectrum+.

Unlike other portable machines, however, the Spectrum Portable will be battery operated, requiring no external power supply.

"This is one of the many projects in the pipeline, although no definite release date has yet been set," said a Sinclair spokesman.

Research into new types of high-performance batteries is now under way at Sinclair's Mealab development facility. The Metalab team worked with Polaroid on the battery for the Sinclair flat-screen tv and is currently working to design the power unit for the Sinclair Electric Vehicle project.

● Among the developments at Sinclair's Metalab is a solid state drive for the QL. This silicon version of the Winchester hard disc drive will run up to 100 times faster than a conventional device.

Low-cost modem

UNICOM has announced a full-feature modem costing only £60.

For the price, which includes postage and packing, Unicom is offering a modem, complete with leads, power supply and manuals, which connects to any micro with either an RS232 or RS432 interface. It features auto-answer, and auto-baudrate scan facilities, and operates at a variety of baud rates: 300/300, 1200/1200, 1200/75 and 75/1200. The device also allows one- or two-way simultaneous transmission (full and half-duplex).

Unicom's low cost modem. Details from Unicom, 20 Orange Street, London WC2

Software is also available, on Rom at £24, and disc at £12 to give access to a number of networks including Prestel, Micronet and Telecom Gold. It also provides an auto-dial and auto-redial facility, and enables the use of a printer to dump data sent and received.

Tangerine in troubles

TANGERINE, the company which spawned Tansoft and Oric Products International, has hit trouble.

Teknocron Circuits, an Isle of Wight company, has presented a winding-up petition against the company. The petition has caused some surprise, since Tangerine has been largely dormant since Oric and Tansoft became separate entities, and Tandata was bought by Applied Petroleum.

"The petition concerns an argument which has been going on for the last three years," explained Oric managing director Barry Muncaster. "Teknocron made the circuit boards for Tangerine's Tantel Prestel adaptor. The money it says we owe them is around £4000 of outstanding interest.

continued on page 8 ▶

Acorn micro music add-on

ACORN is to launch a music synthesiser add-on for the BBC B at the COMPEC show, beginning on November 13.

Manufactured by Hybrid Technology, the synthesiser plugs into the BBC and also connects with a hi-fi system. The user can write and program music on the micro, using a specially developed language, which can then be played back through the hi-fi speakers. The synthesiser can also be interfaced with a music keyboard.

Acorn is aiming the synthesiser at the professional market, and it is expected to sell for just under £200.

Other new Acorn products for the BBC set for launch at COMPEC include the languages *Logo* and *Pascal* — *Logo* on Rom at £69 and *Pascal* on both disc (6502 second processor needed) and Rom. A Winchester hard disc and the long-awaited 32016 second processor option for the BBC will also be announced.

For the Electron, the Plus 3 disc interface will be making its first appearance.

Prestel to hold inquiry

PRESTEL is conducting a top-level investigation into its security following a bizarre incident in which hackers broke into subscribers' files.

Personal identity codes of subscribers were printed on screen, much to the hackers' delight. They were then able to tamper with the *Financial Times* Stock Exchange news, so that at one point, the pound was displayed as being worth $50 and break into the files of stockbrokers Hoare and Govett. They also perused the personal mail of Prince Philip — the Duke of Edinburgh is a Prestel subscriber.

"We are treating this very seriously indeed," said a British Telecom spokesman. "I can confirm that there was a severe lapse in Prestel security for a short while. Our immediate action was to change all the identity codes of our information providers, but we are carrying out a full investigation as to how it happened."

Visions of the future

VISIONS Software has shed its marketing operations and is to concentrate solely on program development.

Marketing manager Mike Cowell has left the company and joined CSM (Consolidated Software Marketing) as sales and marketing director. CSM has now gained exclusive marketing rights to all Visions products.

"The amount of money Visions needed to market its own games was way beyond its means," explained Mike Cowell. "Future releases written by Visions may or may not carry the Visions name — that has not yet been decided."

Of those future releases, the next titles to be launched will be four games for the BBC B — *Apple Pie*, *Sim*, *Ultron* and one as yet untitled *Q-Bert* style game. These should be available within a month at between £6 and £8.

ACT — company of the year

ACT, manufacturers of the Apricot range of business computers, has received the Business Enterprise Award as Company of the Year.

The Business Enterprise Award is sponsored principally by the Institute of Directors, and also by Barclays Bank, Lloyds Bank, the Sunday Telegraph and Henley — the Management College.

Tangerine

◀ continued from page 5

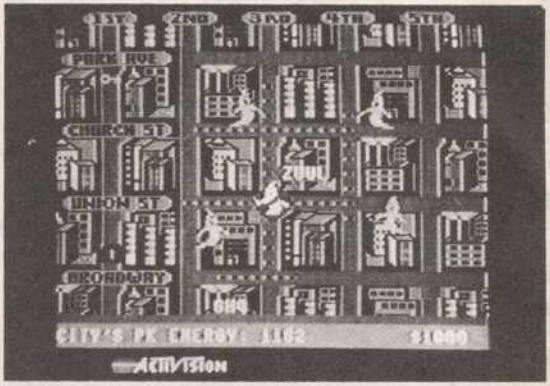
"The action won't mean Tangerine will cease to exist — because it'll pay the money."

● Oric's legal action against its distributors Prism is also due to be heard in court this week (see *Popular Computing Weekly*, October 4). Oric is suing Prism for £4m made up of several smaller claims but has applied for summary judgment on claims totalling £320,000.

"We applied for summary judgment because the £320,000 claim is rock solid and beyond dispute. It concerns product that was taken and not paid for, and product which was not taken," Barry said.

Game of the film

GHOSTBUSTERS — The Computer Game is due out later this month, some three weeks before the film on which it is based goes on general release.



Produced for Activision by *Pitfall* author David Crane, the game plot follows the film fairly closely. The player takes the part of a "ghostbuster", striving to save New York from an invasion of ghosts and evil spirits. The aim is to find, capture and safely store the ghosts out of harm's way. Also making an appearance is the huge marshmallow man, a feature of the movie.

Ghostbusters will be released initially for the Commodore 64 on disc (£19.99) and cassette (£10.99) and for the Spectrum (£9.99). BBC and MSX versions will follow.

Exclusive competition

Win a ZX Spectrum +

Popular Computing Weekly, in association with Sinclair, offers the chance to win a Spectrum + — Sinclair's new Spectrum software compatible micro — worth £179.95 — complete with its six bundled software packs including *Tasword 2*, *Scrabble*, *Vu-3D*, *Make-a-Chip*, *Chess* and *Chequered Flag*.

All you have to do is look closely at Sinclair's current TV advert for the Spectrum + — being shown on Channel 4 and ITV until December — and name the eight Sinclair software programs which are shown on the screens during the advert.

If you think you know what the eight titles are, fill in the coupon below together with your name and address and send it off to us at: Sinclair Competition, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

Just in case more than one of you get the eight answers correct there is a tie-break. Read the idea for a new Sinclair game and think up a good title for it: *'You are invited to an isolated mansion as a potential heir to a vast fortune. To claim the fortune for yourself you must find and piece together the fragments of a portrait distributed around the cobweb festooned house'.*

The best game title, with the correct eight titles from the TV ad will win the prize.

The judges decision will be final. Entries must reach us by midday on Friday, December 7.

Are you only using

To only play games on a Commodore computer is like asking Albert Einstein to work out the square root of four.

The computer's brain barely ticks over.

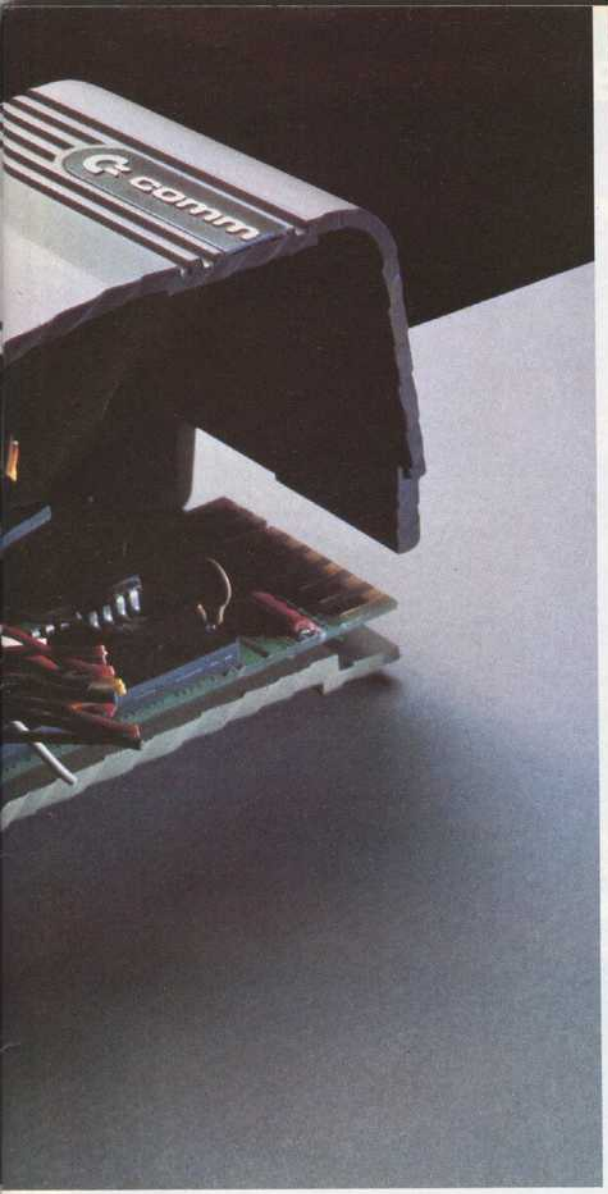
To really stretch it, you need more interesting software programs. For example, record keeping, interactive education, stimulating adventure games or word processing.

And for those you need peripherals.

Like a Commodore disk drive, a really fast storage and retrieval system with a vast memory.

Or a Commodore cassette unit, the inexpensive way of loading and storing programs.

For those who like the idea of text and graphics being more alive and having greater clarity than on a TV, there's the Commodore colour monitor.



COMMODORE MPS801 ☐
Dot matrix printer. £230.00. Tractor feed. Print speed: 50 characters per second.

COMMODORE MPS802 ☐
Dot matrix printer. £345.00. Friction feed for standard paper. Print speed: 60 characters per second.

COMMODORE DPS1101 ☐
Daisy wheel printer. £399.99. Letter quality print on standard paper. Print speed: 18 characters per second.

COMMODORE 1520 ☐
Printer plotter. £169.99. For charts and graphs. Print speed: 14 characters per second.

COMMODORE 1541 ☐
Disk drive. £229.00. 170K memory. 5¼" diskette.

COMMODORE 1531 ☐
Cassette unit. For Commodore 16 and Commodore plus/4.

COMMODORE 1530 ☐
For Commodore 64. £44.95 each.

COMMODORE 1701 ☐
Colour monitor. £230.00.

JOYSTICKS ☐
(prices from £7.50)

PADDLES (£13.50) ☐

Details correct at time of going to press.

1/10th of your brain?

And for hard copy, there are our four printers and a printer plotter. These will preserve on paper–in colour, black and white, chart form, graphs or text, the fruits of all your labour.

Finally, for more exciting games, there are joysticks and paddles.

So use your brain. And make sure you use all of your computer's brain.

Letters

No such animal

Your correspondent John Mawhood (*Letters*, October 25 issue) has indeed spotted a documentation bug: although I'd like to point out there is no such animal as 'The Amstrad'.

Dec$ is not mentioned in the main user guide, and should have been omitted from the technical manual for the Basic, and will be in future editions.

As for the comment: "...ought to be publicised because Amsoft have not officially acknowledged it..." What do you want, low-flying aircraft towing banners?

Late delivery of *Amsword* is a considerable nuisance — but exemplifies several cases where software houses anticipated "just transferring" programs from lesser hardware to the CPC464, but ended up by producing a labour of love inspired to far greater things than originally intended by the power of the hardware and OS.

Mr Mawhood will be receiving a beta copy of *Amsword* today, and he may then appreciate why it isn't a simple clone of the Spectrum product. It is a wolf in sheep's clothing, sir — unlike other products which prompt thoughts of mutton dressed as lamb...

And as for having the Spectrum + dangled in front of us — well, really. And the funny thing is that my spies tell me that many programs using the cursor keys on the original Spectrum seem to be exhibiting some trouble coping with the Plus — even though the Rom is reputedly identical. Nice one!

William Poel
Amsoft
Brentwood House
169 Kings Road
Brentwood
Essex

Delete alternative

Here's a quick Amstrad CPC464 bug. If you type in 10 *Rem* and then hit *Tab* you end up with the line: 10 *Rem* →.

If this is run you get error messages 'syntax error in 32511' and 'line does not exist in 32511'.

However, things get curiouser. Enter Line 10 → and you get a message 'Line 10 does not exist', so it appears the arrow is ignored.

Now try a small program of ten *Rem* statements. If the first one contains an arrow it deletes all subsequent lines if it is *Run*. *Goto* has no effect.

This then becomes an effective alternative to *Delete*. If you wish to delete the whole program after, say, Line 10000 you can achieve this with 9995 *Rem* →, followed by *Run* 9995. Interesting, eh!

D R Halliwell
4 Heatherdale Close
Oxton
Birkenhead

Right-hook comparison

Perhaps someone can enlighten me? How is it that some writers and reviewers say that the MSX standard is the best thing that ever happened to the Z80, while others claim that it is 'substandard' (sub what standard? To the best of my knowledge there ain't been one up to now).

Some of the most vitriolic statements seem to come from the Spectrum diehards, coming out of the blue corner swinging with a right and a left, and following through with a right-hook comparison. Which machine really does fare better?

Sound MSX: 3 voices, 8 octaves, programmable using a macro music sub-language. Spectrum: 1 squeak.

Keyboard MSX: Full-travel, typewriter style. Spectrum: Squelch sensitive, travel-sick.

Cursor keys MSX: Well placed, easy to use cluster. Spectrum: Errmm...Now...which key, oh sorry!

Editor MSX: Full-screen, cursor-controlled. Spectrum: Single line, back to those cursed cursor keys.

Colour attribute problems MSX: Two colours per eight pixels (horizontal). Spectrum (and C64 for that matter): Two colours per 64 pixels (chunky, man!).

Joystick ports MSX: Two D-ports. Spectrum: What joystick port?

Sprites MSX: Thirty-two. Spectrum: ...if you buy *White Lightening*...(Commodore 64: Eight, but who can control them?)

Real-Time Interupts MSX: Eight. Spectrum: None.

Need I go on? If MSX is sub-standard, what does that make the Spectrum? If MSX is out-of-date because of the Z80 chip it is based on, what is the Spectrum based on, a 32 bit wonder! It is not.

All I'm saying chaps is that the Japanese have made a good job of their standard. Their machines are easy to use, well made, well laid-out, and use a more than passable version of Basic (OK so the Enterprise's Basic is better, but I think that this venerable machine must have been got-at by those nasty Klingons).

And the Japanese companies have done what we should have done two years ago — they got together! We the punters are the winners, or we will be if we take little notice of the misinformation which is circulating in certain periodicals.

Mr D A Austin
15 Stafford Avenue
Clayton
Newcatle-U-Lyme
Staffs ST5 3BN

What you have not mentioned in your evaluation of the MSX system is that, whereas the Spectrum is £129 and the Commodore 64 is £199, the majority of the MSX machines cost over £275, and they all have considerably less memory available to Basic than either the Spectrum or C64.

Search in vain

Melbourne House say in the booklet which accompanies their excellent adventure game *Sherlock* 'you will find yourself in strange situations'.

They were right. I had been searching in vain for some time for Major Percival Foulkes when, on returning to Baker Street, I found him in a hansom cab in my hall! I have since tried to remove him and the cab from the hall without success.

A small bug, in an otherwise first-class game.

More practice

Jeff Naylor's review of the Spectrum+ in the October 25 issue refers to a 'bug' in the new welcome tape. The keyboard tutor program will tell you that you need more practice even when you score 100% if you have spent insufficient time in any section. At least four correct keystrokes are required to get a pass mark.

As you are allowed to leave any section at any time, we decided that 'you need more practice' was an appropriate message for those who leave a section precipitously. Regard it as a bug if you will, but it is a deliberate one.

Incidentally, both the welcome tape and the new manual were designed for a much younger user than the original Spectrum items. Sinclair have thought that most Spectrum users, who are in the eight to 15 age group, may have found the original manual heavy going. After all, Sinclair did not envisage the Spectrum being used primarily for entertainment when it first appeared. It was thought in the beginning that it would be used by small businesses and in education.

Goldstar Software were specifically required to replace the original items with brighter, more easily understood, and friendlier productions, omitting the more esoteric technicalities, and maybe even some of the less esoteric ones.

RULE THE WORLD WITH 16k!

SUNSHINE

There's more sheer computing power and possibilities locked up in your new Commodore C16 than you've realised. And David Lawrence in his new Sunshine book, the Working Commodore C16, shows you exactly how to apply that power.

With a full collection of sophisticated programs for both home and business, this book contains just about every routine and application you're likely to need. And all for just £6.95. You can use these programs directly, or incorporate them as subroutines in your own work, or learn how to develop your own.

This book is also your introduction to programming in Commodore's new C16 BASIC. But, most of all, it's an excellent 'hands-on' manual to guide you through the pitfalls – and pleasures – of working with your new C16, realising its surprising capabilities, and planning how to rule the world from its keyboard!

Look out for the Sunshine range at W H Smiths, Boots, John Menzies, other leading retail chains and all good book-shops. Dealer Enquiries: 01-437 4343.

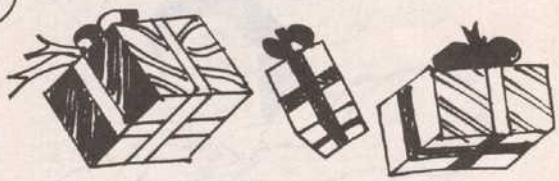
What's New For Christmas? See For Yourself

The Christmas ZX MICROFAIR

GO ON A SHOPPING SPREE FOR ALL YOUR
NEW SPECTRUM AND QL GOODIES!
— MANY AT SPECIAL SHOW PRICES —



TWO FANTASTIC DAYS

17th and 18th NOVEMBER 1984
AT ALEXANDRA PALACE, WOOD GREEN, LONDON N22.

ADMISSION ONLY £1.50(Adults) £1.00(Kids)

Come along on Saturday or Sunday 17th and 18th November to the Show that shows you everything for Sinclair Computer enthusiasts!

Why spend weeks looking for Christmas presents . . . one day at the Christmas ZX MICROFAIR will take care of everything!

And you'll have a fantastic day out . . . meeting friendly people . . . having fun . . . full of Christmas cheer!

Send now for reduced price advance tickets — and don't forget to note the date!

EXHIBITORS!

JOIN THE RUSH . . . CALL MIKE JOHNSTON OR MOIRA ON 01-801 9172 FOR FULL DETAILS OF STAND AVAILABILITY . . . DO IT *NOW!*

SEND FOR REDUCED PRICE ADVANCE TICKETS NOW AND BE FIRST IN THE QUEUE!

14th ZX MICROFAIR
ALEXANDRA PALACE, WOOD GREEN, LONDON N22
SATURDAY AND SUNDAY
17th and 18th NOVEMBER 1984
Saturday 10.00 am to 6.00 pm
Sunday 10.00 am to 5.00 pm

Post to: Mike Johnston, ZX MICROFAIR, Dept PCW, 71 Park Lane, Tottenham, London N17 OHG. Tel: 01-801 9172.
Please send me ADVANCE TICKETS for the Special Christmas ZX MICROFAIR.

I require the following:— ..... Adult tickets @ **£1.25.** ..... Children's tickets @ **£0.80p** for Saturday/Sunday (Delete as applicable)

I enclose cheque/P.O. made payable to ZX MICROFAIR for the full amount (please include cheque card number on the back of cheques) and I also enclose a STAMPED SELF-ADDRESSED ENVELOPE for return post.

Dragon Slayer

Rid the land of ferocious dragrons armed with only a sturdy bow, in this arcade game by Richard Snowdon for the QL

Many years ago, when dragons roamed the forests, a typical day's work may have involved ridding the land of herds of ferocious dragons. But this is no easy task, as the dragons are devious, and powerful and will soon defeat you if you lack concentration.

Here, the QL becomes your own personal hunting trainer to tune up your reflexes. A direct hit is required to destroy a dragon, but plan your attacks well, as you have only six arrows. Once this stock is depleted, you must venture across the river and enter the castle to re-stock.

Use the cursor keys to move, and the *ALT* key to fire. To enter the castle, stand just in front of the castle door and step inside when it opens.

Quest for discs

***Christina Erskine** talks to Paul Bygrave from Quest*

The idea of the Sinclair QL as a small business machine has been given a shot of extra credibility with the recent launch of a wide range of business-style add-ons for the machine from Quest International Computer Technology.

The Quest QL Executive series (Newsdesk, November 1 issue) includes five floppy disk drives ranging in price from £249 to £599 — single 200K, 400K and 800K and dual 400 and 800K models — a 7.5Mb Winchester hard disc drive at £995, four memory expansion boards from 64K to 512K, microdrive and disc versions of CP/M (£49.50 and £79.50), and Tally, a comprehensive accounts package.

Quest's main field of interest, until now, has been in operating systems and Winchester discs for micros in the IBM/Sirius/Apricot range, making their move 'down' to the QL all the more interesting. Very much like Sinclair, Quest operates solely on a research and development basis — all manufacturing is sub-contracted.

Paul Bygrave, Quest's technical director, explained why the QL had caught the company's attention: "Initially we were interested because the QL used the Motorola 68000 processor — we had been aware of the chip's development in the US for some time and its possibilities. The QL's specification made it look like a good machine, and good for items such as Winchesters to run on. We also had the experience to do memory expansions — we felt there was room for an alternative operating system to QDOS, and gradually we progressed to a complete set of packages. Judging from Sinclair's record, we felt the machine would be a volume seller.

"To me, the QL looks like a starter machine with considerable business potential. Perhaps it has been treated with some caution so far because it's not easy to define its market — we're hoping our range will help define one end of it."

Paul joined Quest in March 1984. Previously he and Ralph Warren, now Quest's general manager, headed a company named Raw Computers. Raw was sold to Quest Automation and re-emerged as Quest International Computer Technology, part of the Quest group.

The decision to implement Digital Research's CP/M-68K operating system on QL arose from a feeling that CP/M — apart from its large established software base — was more suited to business applications than QDOS.

Quest is currently working on a few refinements to the Executive series for the near future; one such is a utility to enable data file transfer from QDOS to CP/M: "We want our CP/M system on the QL to be able to co-exist with QDOS — to enable people to go directly from the QL to the type of machine they have in the office," Paul continued. "One sector of the market we do envisage using our system on the QL is people working on business at home. They will be able to take their data on disc from the QL and feed it straight into their office micro."

Other work in progress includes the facility to allow the floppy disc drives to run 3½ inch and 8inch discs — at the moment they run 5¼ inch only. "We chose 5¼ inch to start with because it's the one most people are familiar with — and although we will release a controller board for 8inch, I don't really see it as a heavyweight market."

Quest has been working on the Executive Series since the QL's launch, and have had Sinclair's full support throughout since, as one Sinclair executive put it, Sinclair has neither the time nor inclination to manufacture QL peripherals itself.

"Sinclair provided all the necessary documentation, and notified us immediately when the new SuperBasic versions came out. We also worked closely with Psion on our *Tally* software packages — we wanted the *Tally* accounts programs to integrate fully with Psion's bundled software. As a result, you can take data from *Tally*, load *Easel*, and have your data represented in graphic form without any re-input needed."

Paul is quick to stress that in bringing out a range of floppy disc drives, Quest is not suggesting any inadequacy on the part of the QL's in-built microdrives. "I think the microdrives serve a definite purpose, and the Psion packages are very good indeed, but some people will find they simply need the extra space and speed that conventional discs can offer.

"Obviously we're aware of the arguments against microdrives, and, yes, we did have some problems with them, but with our range, people can build up slowly to the level they want."

Quest's Executive series will also be made available in its entirety in the US when the QL is launched there early next year. "I can see the QL being very successful in the States — they'll see the machine as very much a home micro, but at a fantastic price — much cheaper than an Apple, for example. I also don't think the Americans will be quite so critical of microdrives, surprisingly enough. I think they'll see them as an exciting novelty — which may not be so good for our floppy discs!"

In the long-term, Quest is looking at possibilities for networking and multi-user multi-tasking on the QL. "We have an option on Digital Research's concurrent disc operating system, which is a system emulating MS-DOS for multi-tasking, but this is really looking quite far into the future.

"It takes a very long time to test the system — the writing doesn't take nearly so long, but I can't see anything happening before the second half of next year."

Meanwhile, Quest is still working on its Firefly Winchester disc range for the 'heavyweight' micros — adding the Apricot F1 to the list of machines to carry Firefly and looking at its possibilities on the IBM AT.

The QL Executive series, however, will form the major focus point of Quest's stand at Compec, the business computer exhibition at Olympia later this month when the series will go on show for the first time to the public.

BOURNE HOUSE!

Commodore 64 Machine Language for the Absolute Beginner. Everything the first time Commodore user needs to know about Commodore 64 Machine Language. Each chapter includes specific examples of machine language applications that can be used on your Commodore 64. Easy to understand, this book is essential for every Commodore 64 owner wishing to go beyond BASIC.

Spectrum Software Projects is a special book which will enable you to create useful programs and learn more about programming.

Software Projects gives you program ideas, discusses the overall set-up and an outline of the various procedures. You write the programs, and Software Projects tells you how to test them or offers hints and clues on how to do it. Create six useful programs, ranging from information management to business programs and games.

Building Blocks for BBC Games is the book for all BBC enthusiasts! Using a unique modular method you can create and build exciting, original games and programs.
The ready-made building block system has all the procedures you need. Step-by-step, you write a BASIC program with the minimum of effort. Then you can expand your programs with even more procedures and innovations into complex and exciting routines.
Simply written, easy to follow, with BBC Building Blocks you will learn more about your micro than you believed possible.

Commodore 16 Games Book. Take on a great challenge! This new release for your Commodore 16 will test your reflexes, your nerve, your logic, your strategy and your intelligence — with education games, simulation games, gambling games and much more!

With the unique CHEXSUM verification program you can make sure your games are bug free.

All these games explore to the fullest the extended graphics and sound facilities of the new, easier to use BASIC.

Program structures are outlined and key variables are given so that you can learn how to modify and extend these games for more fun-packed action!

Commodore 64 Games Book 2. Just when you thought it was safe to go back to your micro . . . here's 30 more exciting, original games for your Commodore 64. Every game is new! And every game has been specifically designed with easy to understand sub-structures so you learn programming skills as you go. There's arcade games, strategy games and games you can modify and develop yourself. With CHEXSUM typing in is easier, and mistakes are quickly located. A must for all Commodore owners.

HURRY! Order before the end of this year and claim a special £1 discount...

Order us about...

Here's how to get a pristine copy of Popular Computing Weekly, delivered by a uniformed representative of Her Majesty's Post Office, every week for a year. Or, if you're watching the pennies, for six months.

Normally, it only costs £19.95 to get first-class delivery of your first choice magazine for a full twelve months, and a measly £9.98 for half a years worth of Popular Computing Weekly, weekly.

But if you order before this year comes to an end – that is by December 31 – then we'll reduce the cost of a full year's sub by a further 100 pence to a low, low £18.95.

Order your PCW subscription on this special order form, now.

about 50 times a year.

Popular Computing Weekly First Class Subscriptions Order

Please reserve me a subscription to Popular Computing Weekly for:

☐ 12 months at £19.95 – now only £18.95 if you order before 1985!

☐ 6 months at £9.98.

Overseas Orders:

☐ 12 months for £37.40 – now only £36.40 if you order before 1985!

☐ 6 months for £18.70.

Payment Methods:

☐ I enclose a Cheque/Postal Order payable to Sunshine Publications.

☐ Please charge my credit card. ☐ Access ☐ Barclaycard

Demo mode

Program *Kensington* **Price** £12.95 **Micro** Commodore 64 **Supplier** Leisure Genius, 3 Montague Row, London W1H 1AB.

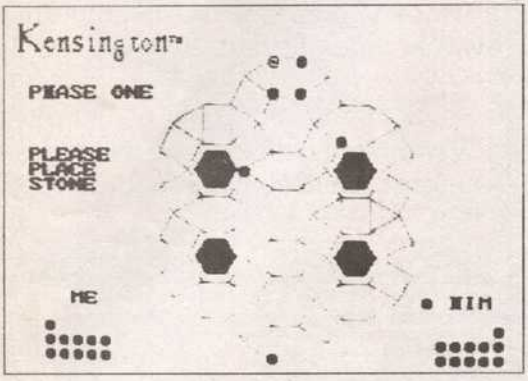
Kensington forms part of Leisure Genius's series of micro vesions of well-known board games.

Kensington can be used in a number of different modes. The most useful of which enables a solo player to pit his wits against the program, which can play at three skill levels — novice, intermediate and expert. At the expert level, it proves quite a formidable opponent. The program can also be used by two players using the board displayed on the screen in place of a real one — which seems fairly pointless. Alternatively, both players can be played by the computer giving a demo mode.

There are several other options, for example, you can control the speed at which the computer makes its moves, ranging from too fast to follow, to paralysingly slow. You can also watch the program trying out its moves before it selects the best one.

This is a good presentation of an already enjoyable board game, and makes for a handy way for one person to enjoy a game of *Kensington*. The only complaint is that it would have been nice to have been able to use a joystick for control.

Richard Corfield



Overlay

Program *Grasp* **Micro** Amstrad CPC 464 **Price** £8.50 **Supplier** Camel Micros, 33a Commercial Road, Weymouth, Dorset.

Grasp is a graph dawing package which will produce variations about three main types of graph: bar, line and pie.

Before you can draw a graph, it is necessary to have the correct data. This data is stored in four 100 element files and can easily be edited. If you want to draw a line graph you must enter the *x*-axis data into one file and the *y*-axis data into another. This can be done using the editor, or, if the data is linked by a mathematical formula, simply by entering the equation.

A graph of your data is drawn by pressing a single key depending on the graph format to be used. Other junctions allow graphs to be overlaid on the screen, tests to be added, and display to be dumped to a printer.

To define your own graph format you have to specify the type, colour, size, position, scaling etc. If you require it, auto scaling can be used.

Overall, *Grasp* is a very good program with extensive facilities which are clearly described in the comprehensive manual. With practice, complex graph formats can be described.

Greg Pearson

Key press

Program *Zedis* **Micro** Amstrad CPC 464 **Price** £6.95 **Supplier** Pride Utilities, 7 Charlton Heights, Charlton, Luton LU4 9UF.

Zedis is a machine code editor and disassembler for the Amstrad CPC 464. It uses the 80 column display, 40 columns being used for the disassembly, the rest showing the options available and your previous commands.

The commands are limited to those that change the start address of the disassembly, insert a character string or hex digits into memory, move a block of memory, or search memory for a specified 16 bit word.

The disassembly is displayed as a series of pages, each consisting of 24 lines forward or 80 bytes back. The disassembly on the screen can be copied to a printer by pressing the *Copy* key. This means printing a lot of code requires an equal finger numbing amount of key pressing.

As the program is written in Basic, it can't be relocated in memory, and use with another Basic routine will require merging of the programs.

If you only require a very simple disassembler/editor then *Zedis* may be sufficient, more than that and it probably won't be good enough.

Greg Pearson

Dumb-bell

Program *Boxer* **Price** £9.95 **Micro** BBC B **Supplier** Acornsoft Limited, 4a Market Hill, Cambridge CB2 3NJ.

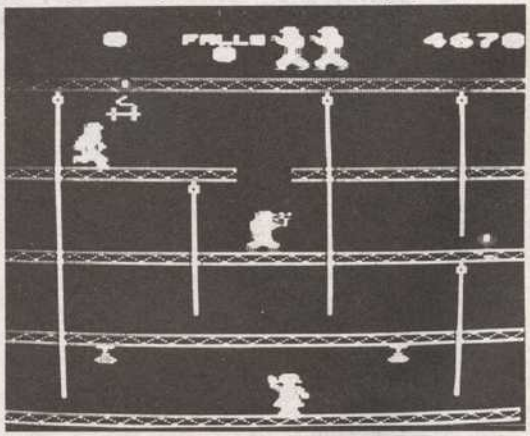
Fast moving action is required to win the heart of the blonde heroine. The scenario is that he-man you and your micro-macho rival are in a gym vying for the attention of a girl by catching the balloons she keeps releasing from the floor. You can catch them only when they lodge in the rafters or beams at various levels. This means you must shin up and down ropes, run to and fro, jump to the balloons — and avoid moving ones as they knock you over.

As if that weren't tough enough, you also have to avoid boxing gloves, hammers and dumb-bells that come flying across the screen — not to mention odd things your rival drops on you.

You can punch hammers and gloves if you are fast enough but have to jump dumb-bells. You get points for balloons caught, items punched or jumped. But your opponent gains points if balloons get past you to the top and he is also steadily scoring points himself!

Action is by keys or joysticks with fast, smooth animation but curiously little sound. By no means the most original or compelling arcade game based on an overworked 'sense' theme.

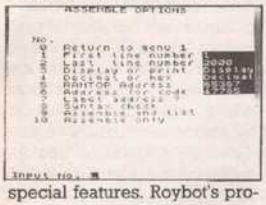
Dave Watterson



Slow trace

Program *Assembler and Debugger* **Micro** 48K Spectrum **Price** £9.95 **Supplier** Roybot.

The market for Spectrum Assemblers has become a tough one, and programs have to compete in the areas of testing facilities and



special features. Roybot's program scores well on both these counts, and makes up for a slightly non standard line entry and label procedure.

The instructions are entered as Basic *Rem* lines: not an approach I would prefer, but easy to get used to. Labels are not used as such, instead you refer to the line number of the routine to *Call* or *Jump* to. This rules out using a meaningful name for a label, and is something that many programmers will miss. However, the program is easy to use, and different subroutines can be merged together allowing the build up of a library of different subroutines.

The best part of this program is its test facilities. It allows single step or slow trace, showing all registers, plus various memory locations. Also included is a fast trace and the use of 'Non Stop Calls', a sort of Express Coach of machine code to use with bits of the program you are sure work properly. The program also maintains a history of the last ten instructions to be executed, allowing some insight into how you got in that endless loop! Also provided are breakpoint, direct entry of instructions, and many more, all easy to use.

The only literature provided is the small cassette box insert, but as the program is menu driven this is not an important omission. Roybot's *Assembler* won't be everyone's best buy, but is good enough for most home machine code programmers.

Along with a suitable introductory book, it will give a low cost way in to this more advanced programming language.

Simon Springett

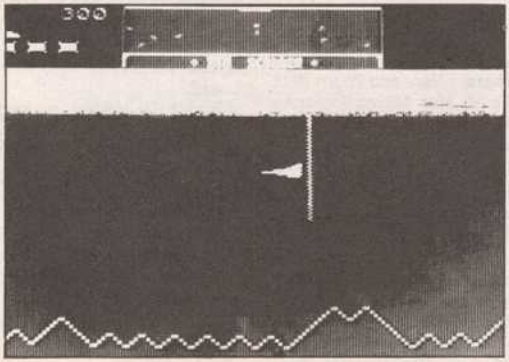
Frenzied

Program *Scuba Attack* **Micro** Spectrum **Price** £6.95 **Supplier** Century Software, Portland House, 12-13 Greek Street, London W1.

It can't be easy thinking of new shoot-'em-ups, but this one contains enough that is novel to make it interesting for those with itchy trigger fingers.

Actually fingers are its major failing — six controls are needed and almost all at the same time. Play can become a tangle of digits.

Meanwhile, on the screen, your submarine defends divers from 'frenzied jellyfish' (frenzied jellyfish — is this for real?). Your laser fires forwards and three sonic bombs can destroy everything in the area; a long range scan completes your equipment.



This results in a fast-moving game — not highly sophisticated in sound or graphics but both are passable — I particularly liked the wobbling whirl of the aforementioned jellyfish.

One hitch is that fresh attackers sometimes appear too close to the submarine, destroying it instantly — survival calls for quick reactions at the best of times.

While there is still a market for a basic run-and-shoot game this could sell steadily, though at the moment it is overpriced. A twin-fire programmable joystick would improve the play considerably.

John Minson

Big bug

Program *Pi'-'in'-ere* **Micro** Spectrum **Price** £6.00 **Supplier** Automata UK, 27 Highland Road, Portsmouth, Hants.

Arcade freaks watch out for this program in the series featuring Burt, the large nosed cult-figure from Automata.

In this game he is inserted into a computer's innards to search out various bugs, and eventually the elusive (well, I didn't find it) Big Bug.

The graphics are very cleverly done — particularly the way the central character turns — and the game uses colour and sound well. The snag is that, even with a joystick (all the usual options are available), the response is far from quick: the little creature takes so long to turn round that the bugs are on him before he can get around to moving away. The game feels impossible at first but you will quickly develop strategies to clear each of the 61 screens — that is if you haven't found anything more interesting to do, like listening to *Today in Parliament*.

You see, the truth is that I found this game boring. The sound track on the cassette flip side is quite fun, but totally unsurprising. And I feel the same about the game — it works very neatly but the ideas have all been used many times before.

Simon Springett

Minimal

Program *The Horselord* **Price** £12.95 **Micro** BBC B **Supplier** Century Publishing Co. Ltd., Portland House, 12-13 Greek Street, London W1V 5LE.

Century bring us a combination novel and arcade game package built round Peter Morwood's sword-and-sorcery book *The Horselord*. The novel is not striking but quite fun with all the standard features of young man making good in a world where all seems set against him. The game is designed by Jonathan Griffiths of *Snapper* and *Rocket Raid* fame. I wish it were even as good as the book.

In fact the action is based on a four page section of the 250 page book. The hero, Aldric, takes part in an obstacle

course for horse soldiers. Like a joust it has dummy swords and dyes to indicate strikes rather than blood. The scenario is that as a messenger he must beat the opponents and deliver vital news to the castle. In the book something unexpected happens ... but not in the game.

You see the plan view of a course like the @ symbol. Riding up to an obstacle the screen changes to give you a closer view. It may be a water jump or more often an ambushing enemy to be destroyed. You may swing at opponents with sword or let loose one of the arrows in your stock. It takes five strikes or one arrow to down an enemy swordsman. You play against the clock.

You can use joystick or keys but your actions are limited to turning left or right, accelerating and jump/strike or fire arrow. The movements are fast but jerky, the graphics chunky, the sound minimal.

In short it is boring and a poor way to spend £12.95

Dave Watterson

Unnamed

Program *Shuttle Shock* **Micro** Spectrum **Price** £2.99 **Supplier** Software Supersavers, Bear Brand Complex, Allerton Road, Woolton, Liverpool.

For this, their bargain priced label, Software Projects have stripped packaging to a basic minimum. Gone too are fancy loading screens and elaborate graphics. Indeed *Shuttle Shock* resembles a primitive *Manic Miner*.

Your character (unnamed — I said this was stripped down) walks left, right or teleports at 45° around a series of platforms. Lifts provide some help but accurately judging the teleport leaps is most important.

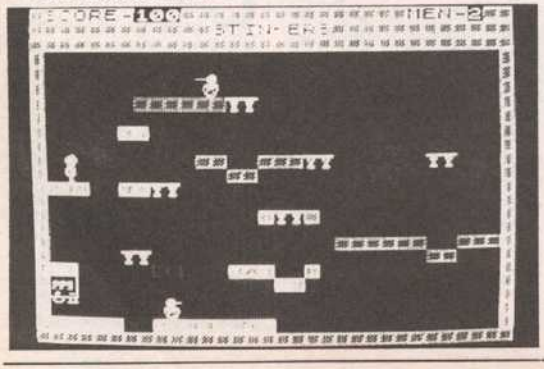
Inevitably, deadly beasties roam the place on set courses, so timing is vital if you're to reach the exit to the next screen. There is also continuous, infuriating music (although it can be turned off) and the traditional humourous screen titles.

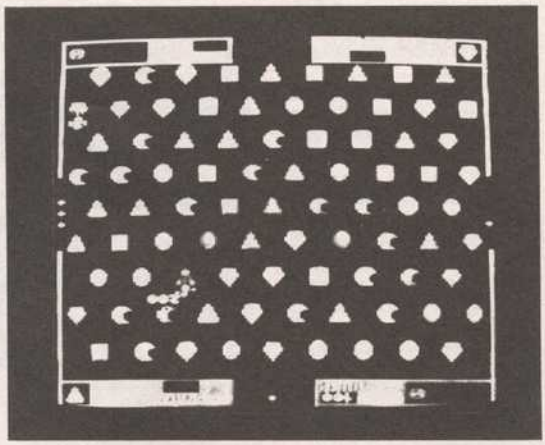
As with all games of this type, the fun lies in seeing what comes next, the addictivity in that you only learn what to do by playing.

However, I did notice one point in Screen Two, which is rather too harsh in taking a life.

The game looks bargain-priced but performs well and is a clever, not too difficult addition to the platform-maze game family that should suit newcomers. Recommended at the price.

John Minson





Mean streak

Program *Drogna* **Price** £9.95 **Micro** BBC B **Supplier** Acornsoft Limited, 4a Market Hill, Cambridge CB2 3NJ.

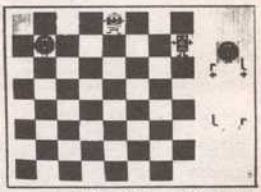
Based on part of TV's 'Adventure Game' *Drogna* offers the fascination of a game where the rules change as you play. What's more it is one of those rare micro games for two people. Strategy, lateral thinking and a mean streak all make a contribution to the winner's skill.

You play on a screen composed of five different shapes each of which may appear in five different colours. You are given a base shape and colour which allows you to move onto any colour in your base shape, or onto any shape in your base colour. Think about it! The fun really starts when you learn that on each turn the base shape and colour may change! This system means a colour TV or monitor is essential.

The purpose of your action is to steal diamonds from two stores and transport them to your lair. But your larcenous opponent may steal your gems — even the topmost one in your lair ... and you can do the same to him or her. Strategy is involved in planning your routes, deciding where to park the loot temporarily if you can't move where you want, and in attacking your opponent so as to make them dissolve into the walls and re-materialise at their lair. The first to win 900 points worth of diamonds wins.

Play is by keys or joystick and as fast as you expect from Acornsoft, though the sound effects are limited. As a game it rates far below *Elite* but should entertain younger members of the household and has the advantage of allowing two to play at once.

Dave Watterson



Directions

Program *Here and There With The Mr Men* **Micro** Spectrum 48K **Price** £7.95 **Supplier** Mirrorsoft, Holborn Circus, London EC1.

Mr Reviewer has an educational program featuring his friends, the Mr Men. It contains four games to teach four to eight year olds directions. Whoopee!

Mr Reviewer's mental age is five. Also, Mr Reviewer could never tell his left from his right. But there you go. Here he has to guide things from his own and the Mr Men's point of view.

The first jigsaw game is a bit boring, but making Mr Tickle tickle Mr Grumpy is much more fun. Then a big worm has to be sent up a tree to knock apples into Mr Lazy's mouth. Finally four Mr Men gang up against Mr Tickle on a chess board.

Roger Hargreaves' cartoons transfer well to the micro, as those nice Mr Men at Mirrorsoft have shown before. A colour television is advised for these games though.

Mr Reviewer thinks that this program should suit the age-group suggested, but youngsters will need guidance.

John Minson

HEAR IT . . ., SPELL IT . . ., SEE IT . . .!
ITS
SEE HEAR (Educational Software)
BY

Softlee Systems

(CURRENTLY AVAILABLE FOR THE 48K SPECTRUM)

Every tape contains a 20 minute spoken story and a spelling program running together simultaneously on one side of a single tape, which is played on any *stereo* cassette deck linked by a connecting lead to your computer and headphones.

The first in the series is **"A DAY AT THE SEASIDE"**; the story of Jo's trip to the coast and the adventures which take place there. The user is asked to spell 21 words (for example car, train, sea, beach), which are interspersed throughout the story and each word spelt correctly reveals a detailed and colourful picture of that object. A set of *Free* flash cards, which have a writing aid on the reverse is supplied with each tape. All for £9.75.

The connecting lead, for use with all tapes using the *See Hear* system is available for £1.95.

Send now, for depatch by return, to:-

Softlee Systems, FREEPOST, Kenilworth, Warks CV8 2BR

Other stories in the series include a picnic in the park and Jo visits the farm

48K Spectrum

£7·50

Software by fantasy

Communicator

Hardware *Touchmaster Pad (plus Multiprint program)* **Micros** Spectrum, Commodore 64, Vic 20, BBC, Dragon 32 and 64 **Price** £149.95 **Supplier** Touchmaster, Kenfig Industrial Estate, Margam, nr Port Talbot.

For those of you who are not able to type, or who dislike doing so, there are many alternative ways in which you can communicate with a computer.

Joysticks, light-pens, touch-screens and mice are some of the more common ways of keeping your fingers away from the keyboard.

Now, Touchmaster, the company which has sprung out of the collapsed Dragon Data, provides yet another way.

It has produced what it claims is 'a revolutionary' touch-sensitive pad that sits next to the computer. This device (from which the company takes its name) consists of a wedge-shaped plastic case about 15in long and 12in deep, rising from half an inch in height at the front to about two inches high at the back.

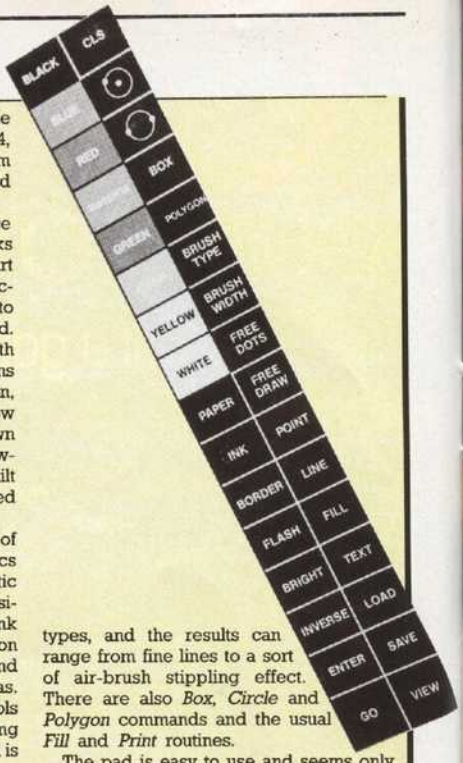
Most of the upper surface of the Touchmaster is taken up by an A4-size rubber pad, which forms the communication surface itself.

This pad has a touch resolution of 256 x 256 points, and information about which points have been touched — using a stylus like a ball-point pen which is supplied with the package — can be transmitted in serial or parallel form to the host computer via a Din connection at the back. The company so far, is producing versions for the BBC, Spectrum, C64, Vic 20 and Dragon 32 and 64. Versions for the Amstrad and MSX are also under development. Micros that already possess a suitable interface, such as the BBC, need only a cable; those like the C64, the Vic20, the Dragon and the Spectrum need an extra interface (which is included in the price).

The Spectrum version has the interface contained in a black plastic box that looks just like a Dragon games cartridge. Apart from the standard connector to the Spectrum, there is a ribbon cable that plugs into the parallel port on the Touchmaster pad. The power comes from a power supply with an integral mains plug and the connections are shown clearly in the documentation, which also includes short routines to allow the Touchmaster to be used in your own programs. The proof of the pudding however, lies in using some of the purpose-built software for the device — the so-called 'Touchware'.

Included in the pack is a copy of *Multipaint*, a fairly complex graphics package. As with all Touchware, a plastic overlay is included that fits over the sensitive pad on the Touchmaster. This is blank on most of the surface except for a section about an inch wide down the right-hand edge that is divided into 40 small areas. Pressing these with the stylus controls colour, brush type and width, drawing mode and so on, while the rest of the pad is used as the drawing area.

The software on the Spectrum loads in about two minutes to display a blue screen with a small information area along the base to remind you of the ink/paper colour, drawing mode, etc. A large cross acts as the drawing cursor, and once the brush type and width have been selected, drawing can commence. It takes some time to get used to the fact that your hand is moving in one place, while the results are appearing somewhere else, but once you get over that conceptual hurdle, the effects can be quite good. There are brush widths from one pixel up to 32, as well as five different stroke



types, and the results can range from fine lines to a sort of air-brush stippling effect. There are also *Box*, *Circle* and *Polygon* commands and the usual *Fill* and *Print* routines.

The pad is easy to use and seems only limited by your own graphic ability and of course, the Spectrum's restrictions on colours in the same character square, which produces chunky edges if you aren't careful. My only complaint with the Touchmaster in use lies in finding where you are on the screen, as there is no record of your progress on the pad.

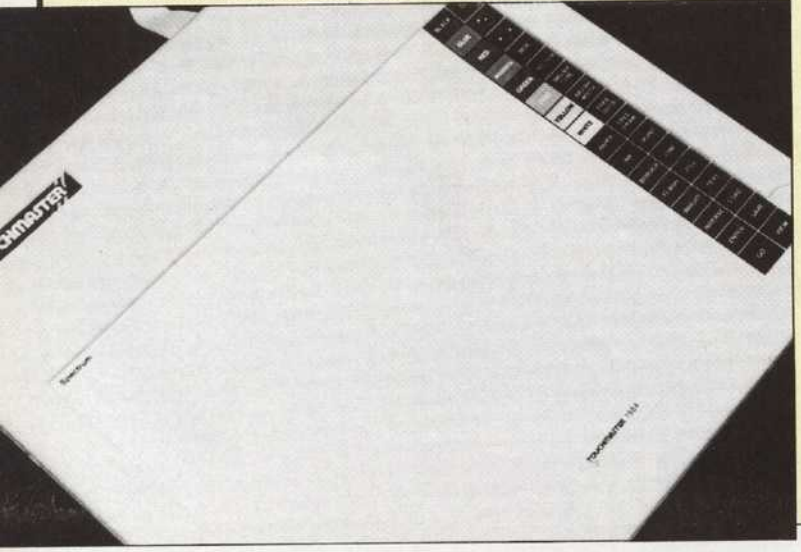
The BBC version of the pad will clearly produce better detail, and if a QL model were to be produced we could look forward to something approaching the electronic paint-box system used by TV companies.

There is also now, a range of software titles available for the Touchmaster pad, including board games, adventures and learning packages. The scope for a device like the Touchmaster in early education or with the handicapped must be enormous, as software can be written that does not involve reading or complex muscular skills, merely the recognition of shapes or colours and the ability to touch the pad.

My overall impressions are very favourable, and the Touchmaster would be a very useful peripheral for any computer. However, I don't think it will sell particularly well as long as it keeps its present price. If it cost £60, it would be expensive but worth having. At £145, it is considerably more than you would have to pay for a Spectrum, an Atmos, a Dragon or a Vic 20 or C16.

Much as I like the concept, at the moment you'd get better value from a light-pen, and you'd also know where you were on the screen.

John Scriven



Seeing is believing

See the pack – see the screen – see the game. See the difference the moment you pick up one of the games from Firebird's new Silver Range.

The difference is that our packs show the high quality you'll see on the screen when you play, so you know exactly what you're buying.

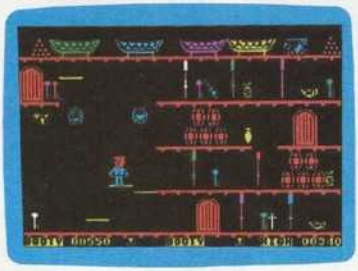
The same high standard applies to all twenty games in the range and all are available at the remarkably low price of

£2.50

firebird

SOFTWARE

Here's a sneak look at three of the NEW games:

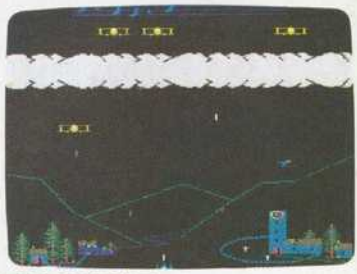


BOOTY

Feast yer eyes on the BOOTY-ful treasure stored in 20 holds.
There be pirates, parrots and fun galore!!!

THE WILD BUNCH

Can you survive life on the run in this Wild West adventure???



BIRD STRIKE

Dodge the planes and shoot the pigeons to complete the tune –
then move to the next level.

Look out for these games in the FIREBIRD silver range at selected high street stores.

SPECTRUM: THE WILD BUNCH · BOOTY · MR. FREEZE · TERRA FORCE · VIKING RAIDERS · MENACE · EXODUS · RUN BABY RUN · CRAZY CAVERNS. **VIC 20:** SNAKE BITE · MICKEY THE BRICKY.
COMMODORE 64: BOOTY · MR. FREEZE · EXODUS · HEADACHE · ZULU. **BBC MICRO B:** BIRD STRIKE · GOLD DIGGER · ACID DROPS · DUCK!

The new range from British Telecom. **You'd better believe it!!!**

Elegant

Hardware *Spectrum On-off power switch* **Micro** Spectrum **Price** £4.95 **Supplier** TEC, 24 Victoria Road, Bromsgrove, Worcs.

Peripheral manufacturers have made a good living out of the Spectrum's budget-conscious design. Supplementary keyboards, joystick interfaces and sound boxes by the dozen are available, and it's only with the introduction of the Spectrum Plus and Sinclair's own interfaces that business seems likely to die down.

Meanwhile, TEC's Spectrum Switch remedies an abiding problem, by allowing you to switch off or reset your old-style Spectrum without pulling out the mains connector and risking wear on the socket.

The Switch costs £4.95, is designed with breathtaking elegance and simplicity, and adheres to the back of the Spectrum with stick-on self-adhesive pad. It clips over the power socket, and has a follow-on socket on the back.

It's unlikely to fit on any add-on keyboard, but some of these have built-in reset switches anyway.

The switch itself seems sturdy and reliable, and if you don't have the ability or patience to solder together your own reset switch, you would do well to request Santa to leave one of these in the toe of your stocking.

Chris Jenkins

In storage

Hardware Microdrive storage box **Price** £5.95 **Micro** Spectrum & QL **Supplier** Transform Ltd, Swatlands, Lucks Lane, Paddock Wood, Kent

No, contrary to first impressions, this is not a box to store microdrives themselves, but a neat holder for the actual cartridges, used on the Spectrum and the QL.

It consists of a black plastic box with internal divisions for holding up to 20 cartridges, and a hinged lid to cover them all. Inside there is also a small gap that can be used for anything, such as the sticky labels supplied with the cartridges, or up to four more cartridges.

When your bank manager lets you buy more than 20 cartridges, you can get an additional box, as they cleverly interlock with one another. The cost is reasonable, being not much more than a single cartridge.

The world (well, me mainly) has been crying out for a method of storing the little blighters, and Transform have come up with a neat and cheap way of doing it.

Andrew Pennell

22,000 Learn BASIC the LOGIC 3 Way

Logic 3 publishes a series of teach-yourself programming courses which are—simply the best way to learn computer programming. Each course comes with a 192 page work-book backed up with exercises and experiments. Quiz programs allow you to check how you are getting along. The course has been designed on the basis of considerable experience in teaching people about computers—so you won't be confused by unnecessary jargon.
Club members can order the course for £11.95 (normal price £14.95) add this amount to your order and tick this box.

REVIEWS make Club Catalogue a winner!
The latest issue of the Spectrum Club Catalogue is crammed full of independent reviews of all the best Spectrum products. For a free copy of the catalogue simply send us your name and address on a sheet of paper marked "FREE SPECTRUM CLUB CATALOGUE" or fill in the order form above.

Logic 3's "Learn BASIC Programming" tutorials have been widely accepted as the most easy-to-use, educationally sound introduction to computer programming for beginners.

Sinclair speaks

Let your Spectrum do the talking with ***John de Rivaz***

This program was developed so that CB users could get their Spectrums to say repetitive messages. The messages are listed in statement lines 390 to 430.

After you have found a blank channel, press '!' and enter the channel number. Then tune your CB to channel 14 and hold the microphone near your Spectrum's speech speaker and press *One* and the microphone key. The Spectrum will say 'One four for a copy.'

When another breaker (ie, CB user) answers, usually with 'Break a window' (ie, pick an empty channel), press *Three* and your microphone key, and the Spectrum will say 'Breaker for a copy go to', followed by your chosen channel number. You can press *Four* to get the Spectrum to 'Crank your handle' (ask your contact his CB name), and *Two* to give a count (used to test a link). When you want to talk to your contact, *Five* gives a suitable message.

Program notes

10-120	Creates the speech strings, which are checksummed by the program. Data line 50 is "oh", "zero", "zero", etc.
130	Sets the port number to that of your speech unit, which should use the SP025 chip
150-180	Checksumming routine for the speech strings
190-240	Subroutine that says a string *XS*
250-340	Subroutine that says a channel number between 1 and 99 (the program won't *Input* numbers over 40)
380-550	The main loop

You've got your QL hardware. You've got your Psion software.

Now get your Sunshine book.

SUNSHINE

Just released from Sunshine is the latest book from the highly acclaimed QL QLassics series – and it's called *Quill, Easel, Archive & Abacus on the Sinclair QL.* All these packages, which are included with every QL sold, are recognised as powerful in their own right, but when working together with one another, they become highly effective problem-solving tools for business.

Alison McCallum-Varey's book introduces you to all the four packages, but, most importantly, shows you exactly how to run them as a complete system.

This book, essential for every QL Owner, will expand the day-to-day use of your QL, letting you run Quill and Archive in tandem for instance, and then outputting the results for graphic interpretation by the Easel package.

If you've Quill, Easel, Archive and Abacus on your Sinclair QL, then you need *Quill, Easel, Archive and Abacus on the Sinclair QL.*

Please send me Quill, Easel, Archive & Abacus on the Sinclair QL at £9.95 plus 50p p&p. I enclose a cheque/postal order for £ payable to Sunshine Books.

☐ Please charge my Visa/Access card No.

Printing prettier

Take the strain out of listing with Pretty Prints by **B G Merrick**

SuperBasic is a powerful language designed for ease of programming. Hence it is perhaps surprising that no facility exists for indenting sections of a program when listed to show its structure, especially considering that this function is provided automatically in the database programming languague provided in Archive.

This routine overcomes this deficiency by reading a program file from microdrive (or any other source) and copying it to another device (or back to the same file), formatting it by indenting all multi-line *REP*eat loops, *FOR* loops, *SEL*ect switches, *PROC*edures, *FUN*ctions and *IF* statements as it goes.

In order to use this program, first save the code to be formatted. Then load and run this program. The program prompts for a source and a destination file. The full name including the device should be entered, for example, *'mdv1-pretty'* as this provides consistency with SuperBasic commands and allows a file to be formatted to a printer. However, if just *Enter* is pressed in response to the destination file prompt, and the file is on microdrive, this program will just copy the file to a temporary file as the source, delete the original file and use this as the destination file. At the end of the program the temporary file is deleted.

Main Routine

This initially prompts the user to determine the file names to use and if required copies the original file *(Source$)* to a temporary file and deletes the old version.

After opening the files (Lines 240 and 250) the routine enters a loop which terminates when the end of the source file is reached. Within the loop the program reads a line at a time, calling *Num* to strip any leading spaces from the line, and print the line number to the destination file. The variable *Spc* holds the number of spaces to be placed between the line number and the first command of a line. The amount this is to be altered before and after printing the line is held in Before and After respectively. The procedure *Spaces* determines the values of these variables for the line. Line 340 ensures that an error will not occur if a program with incorrect syntax is passed through this program. Line 350 actually prints the line using *Fill$* to provide a string of spaces.

On exit from the loop, the channels are closed and if used the temporary file is deleted.

Procedure Num

This routine consists of three parts. The first, Lines 460 to 490 simply removes any leading spaces from the line. The second, Lines 500 to 550 gets the line number and prints this right justified in a space of 5 characters (Line 550).

The final part (Lines 560 to 600) is identi cal to the first part except that it removes spaces from after the line number.

Procedure Spaces

This section of the program compares the start of a program line with the statements listed in Lines 930 and 940 as data. If a match is found the *For* loop terminates with a value of 1 to 9 in *N*, representing the commands in the *Data* statements. If no match is found *N* contains the value 10, hence the dummy command '*' at the end of Line 940 preventing an error on the tenth *Read*.

Colon is then set to a truth value representing whether the line contains more than one statement by first testing for the presence of a colon and ensuring that this is not the end of the line.

This can then be used to determine whether or not a structure exists in its single or multi-line form.

The routine then switches on the value of *N* to determine the change in spacing for different statements. The only points to note here are that as a multi-line structure can start on the same line as an ON= or =switch. *Spaces* is called recursively, with the remainder of the line being passed as its parameter. A test for *Then* statement is made in the part that deals with *If*.

Procedure Diff

This procedure simply updates the values of *Before* and *After* by adding its parameters to them.

MEMOTECH MTX500

OVER £35·00 WORTH OF FREE SOFTWARE

The Ultimate. Only £199.

MEMOTECH MTX500 MAJOR FEATURES

STANDARD I/O PORTS
- Variable rate cassette port (up to 2400 baud)
- Two joystick ports using Atari configuration
- Centronics-type parallel printer port
- ROM cartridge port
- Uncommitted parallel input/output port
- Internal ROM board port
- Hi-Fi output port
- 4-channel sound through TV speaker
- PAL composite video colour Monitor port

THE RS232 COMMUNICATIONS BOARD
(required for disc expansions)
- Two independent RS232 ports
- 60-way Disc Drive Bus supporting up to four 5.25 and/or 8 inch floppy disc drives, plus instant access Memotech Silicon Discs, and Hard Discs with capacities up to 32 Megabytes

USER RAM
- Optionally expandable to 512K in increments of 64, 128, or 256K

24K OF ROM which includes:
- MTX BASIC
- Noddy, a simple, text-handling language
- A powerful Assembler/Dissassembler – sections of machine code can be created and run by calling the Assembler from within BASIC
- The sophisticated Front Panel, which displays the contents of all registers (including the F flag register) and pointers during program execution
- All four languages can be used interactively with each other, and with the user

ROM EXPANSIONS
- MTX NewWord, a 32K word processing package
- Hisoft PASCAL, written specially for the MTX Series

THE KEYBOARD
- Full size, 79-key, full-stroke professional quality keyboard incorporating:
- Main Block with typewriter-style layout
- A separate 12-key numeric/editor keypad
- Eight programmable function keys (16 with shift)

HI-RES GRAPHICS MODE
- 256 × 192 pixel resolution plus
- 32 × 24 Text in 16 foreground and background colours
- All 16 colours (i.e. 15 colours plus transparent) are available on the screen together
- 32 user-definable easily controllable sprites
- 128 separate GENPAT statements providing a huge range of user-defined characters

TEXT MODE
- Text resolution is 40 × 24 characters plus
- 128 user-defined characters
- Eight user-definable virtual screens or "windows" (available in all modes)

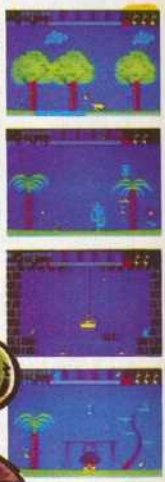
AT LAST THE
ARCADE ADVENTURE FROM MICROMEGA

For The 48K
Spectrum

JASPER!

Available through
good computer
stores everywhere.



BY
DEREK
BREWSTER

22 screens of stunning cartoon animation. Swinging through the trees collect, drop and use the objects scattered around. Speed of reaction is one thing. In Jasper you must also think fast and plan accurately. Can you handle it?

Noises off . . . .

Try using these sound effects to give that professional touch to your programs, from **Mark Gornall**

This program demonstrates seven different sound effects using the *SID* chip. You may look upon them as an example of Commodore 64 sound or you may prefer to use them in your own programs, expanding and improving a particular sound to your own taste.

The program is menu driven, and lets you choose a particular sound or you can play all seven sounds one after the other. You can change the wave form being used, but it should be noted that some sounds may play better in one wave form than another. Here is a short description of each routine.

Sound One plays two notes in a *For/Next* loop, but one note is always much higher than the other, giving the effect a rough musical scale. *Sound Two* uses ring modulation of voices one and three to produce a strange sound. *Sound Three* plays random notes, but the Sustain/Release is set to give a pleasant effect. *Sound Four* plays two notes in the chosen wave form and two notes of white noise all the way up the scale, using voices one and two. It sounds best in saw tooth wave form. *Sound Five* imitates multiple explosions using all three voices. It sounds best in white noise wave form. *Sound Six* plays two musical scales, one starting at the bottom, playing up, and one starting at the top, playing down, using voices one and two. *Sound Seven* is my favourite. It plays a small echo using voice one and sounds great in all wave forms. You may like to try changing Line 228 to *For i=0T040.*

I can never make up my mind which sounds best.

Program Notes

Line 2	Set up screen
Line 4	Initialise variables
Lines 6-28	Print menu, check key press
Lines 30-56	Change wave form
Lines 60-238	Sound routines

FAST LOADERS **COMMODORE 64** TAPE TO DISK

R.B.S.

A NEW GENERATION conversion utility, developed from the acclaimed Hypersave-64, R.B.S. converts virtually all your long loading cassette programs to TURBO-LOAD, faster than the CBM disk drive. Multi-part and autorun programs are handled with ease. Converted programs load independently. No additional hardware, no pokes, no SYS calls, no user knowledge required. Load "The Hobbit" in 120 seconds. Tornado, Lightning load, Fastback now obsolete. R.B.S. will convert more programs than any competing utility. Cassette £7.50p.

HYPERSAVE-64

Retaining the flexibility which the programmer demands. Hypersave leaves you in control. 8 additional Basic commands. Save, load, verify up to 48K continuous Ram at HYPERSPEED with full error checking. Converted programs reload independently. Autorun facility. Hypersave also allows a small number of fast loading programs to be converted to Hyperload. Reviewed in Your 64 issue 2. Cassette £7.50p.

DISKUS I

Introducing the new market leader. This is the simplest to use and most efficient tape to disk tansfer utility yet devised. No program rewriting is required and transferred programs will automatically run when loaded.

★ For single, multi, and autorun programs
★ Automatic filename handling
★ Efficient use of Disk space
★ No user knowledge required

Diskus 1 will handle several program types which other utilities ignore, including headerless files. A bonus program is included which will transfer a number of fast loading programs to disk. Cassette £9.99p.

PRO-SPRITE

Library, Editor, Animator for single and multicolour sprites. Joystick control. Packed with features. Menu driven. 100% machine code. Complete with your first sprite library. Cassete £7.50p.

FREE WITH EVERY ORDER:
***SECRETS!* A GUIDE TO CASSETTE I/O CONTAINING PREVIOUSLY UNPUBLISHED SECRET INFORMATION. FAST DESPATCH GUARANTEED. CHEQUE/P.O. OR SAE TO:**

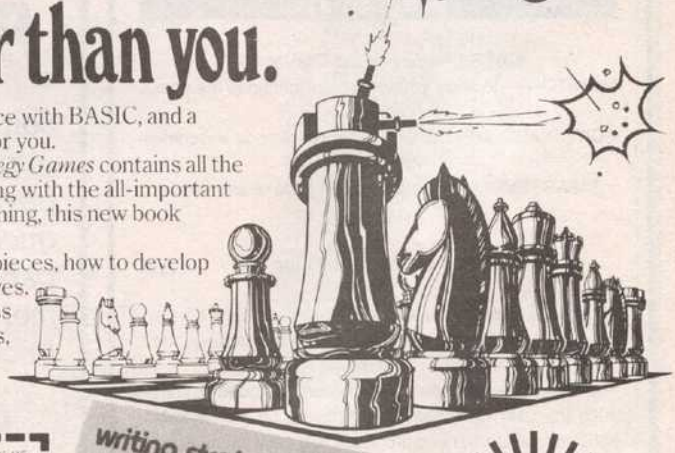
Popular Computing Weekly, Sunshine, 12/13 Little Newport Street, London WC2R 3LD

SUNSHINE

Use your intelligence to write a game that's more clever than you.



If you've a Commodore 64, a nodding acquaintance with BASIC, and a love for real games of strategy, here's the book for you.

John White's latest book, called *Writing Strategy Games* contains all the techniques for intelligent games creation. Starting with the all-important theory, both behind the games and the programming, this new book also details the practicalities involved.

You'll discover how to set up a 'board', move pieces, how to develop standard openings and a variety of endgame moves. If you want to write a Grandmaster-beating chess program, or a four-dimensional game of draughts, then buy this book. Order today from your local bookshop, computer dealer, or by post direct from Sunshine, using the order form.

Please send me Writing Strategy Games on the Commodore 64 at £6.95 plus 50p p&p. I enclose a cheque/postal order for £..... payable to Sunshine Books.

Rates of interest

Clear up a few of your financial problems on the BBC B with the help of ***Neil McGlynn***

This program's purpose is to solve problems concerned with social arithmetic ... the everyday mundane financial calculations that we all have to make.

It has five functions: simple interest, compound interest, depreciation, rates and Vat.

When the program is executed, the user is confronted with a menu, and is asked to choose which service is required.

The program is well strucutured and easy to follow, with Rem statements detailing the workings of each procedure.

Program Notes

Procinitialise	Disables *Escape* and *Break* keys
Procmenu	Prints menu on screen
Procscreen	Draws border around menu
Procsimple	Calculates simple interst
Proccompound	Calculates compound interest
Procdepreciation	Calculates depreciation
Procvat	Calculates Vat
Procrates	Calculates local rates
Procend	Ends program
Procagain	Asks for another calculation

The program could be easily developed further to form part of a comprehensive domestic financial program.

THE 6809 COLOUR SHOW

FOR DRAGON AND TANDY USERS

SATURDAY 17TH AND SUNDAY 18TH NOVEMBER
10 A.M. UNTIL 6 P.M.
THE ROYAL HORTICULTURAL HALLS

If you own a Dragon or Tandy colour computer this is your show.

The first ever show organised in the United Kingdom for these machines.

All the very latest hardware, software, interfaces and peripherals will be there. Your chance to get up to date, try and buy all thats new.

We'll also be organising events and competitions with great prizes. The manufacturers will be staffing advice centres to help with all your queries.

Exhibitors will have special offers on their products so you can save money too!

Large gangways and comfortable rest areas will make sure you can see everything and sit in comfort when you want.

This will be a show for the whole family, plenty to see and plenty to do.

If you want to miss the queues just clip the coupon below.

Computer Marketplace (Exhibitions) Ltd. Part of the Rushworth Dales Group, 20 Orange Street, London WC2H 7ED.

HOW TO GET THERE

The Royal Horticultural Halls are just off Victoria Street a few minutes walk from Victoria or Parliament Square.

Buses 11, 24, 29, 70, 76 and 88 run up Victoria Street.

Mainline stations; Waterloo, Charing Cross and Victoria.

Underground stations; St. James park (District and Circle lines), Victoria (District, Circle and Victoria lines).

There is an NCP car park in Abingdon Street, a few minutes away.

To: Computer Marketplace (Exhibitions) Ltd, 20 Orange Street, London WC2H 7ED.

Please rush me _____ (qty) adult tickets at £2 each and _____ (qty) tickets for under sixteen year olds at £1 each for the 6809 colour show. I enclose cheque to the value of £_____

The dread beast scrolls

The first of three machine-code routines for the Dragon 32 by **Roger Walton**

The Dragon has a poor reputation for lack of quality in its games software. This has often been due to the use of *PMode 4* graphics displays. Although these provide maximum resolution, the user is limited to a two colour display. More recently, programs have appeared using *PMode 3* graphics which are visually more appealing. With careful programming, excellent display becomes possible.

The purpose of this series is to provide a number of machine-code utilities which may be incorporated into programs using *PMode 3*.

PMode 3 requires four pages of graphics memory to display a full screen. The memory set aside for graphics by the Dragon 32 is reserved by the *PClear* command. *PClear 4* is the default value. In normal use, memory addresses *&H0600* to *&H1DFF*, a total of 6144 bytes of Ram, are used by *PMode 3*.

Each point displayed on the screen consists of two bits of memory. This means that each byte will display four points on the screen, giving $4 \times 32 = 128$ points per row. There are 192 rows down the screen so the display is 128×192 in *PMode 3*.

The bit patterns within a byte determine the colour which is displayed. The following table shows how this works:

bit pattern	colour displayed	
	Screen1,0	Screen 1,1
00	green	buff
01	yellow	cyan
10	blue	magenta
11	red	orange

In the first program a routine is provided which will scroll a section of the screen to the left, two bits at a time. 'Wrap-around' has is to stop should be *Poked* into *&H7f69* (see Basic listing one).
the screen as it disappears from the left. The full width of the screen is scrolled but the vertical height of the section scrolling can be set by the user. This is done by *Poking* the appropriate y-coordinates before *Execing* the routine. The y-coordinate at which the scroll should start needs to be *Poked* into *&H7F68*. The address at which the scroll is to stop should be *Poked* into &H7f69, (see *Basic* listing one).

An example of a use for this program would be to scroll a set of options across the bottom of the screen, as in the excellent *Chuckie Egg* game. A later article will provide a character set for this purpose.

The assembler listing is provided so that you can see how the routine works. The next article will show how to scroll the screen to the right and upwards.

★ NOW AVAILABLE FOR THE AMSTRAD CPC 464!!

WIN THE POOLS?

SPECTADRAW 3 – THE LATEST VERSION OF THE ORIGINAL AND BEST POOLS PREDICTION PROGRAM FOR THE 48K ZX SPECTRUM!!

AND NOW . . . AMSTRA-DRAW – THE FIRST POOLS PREDICTION PROGRAM FOR THE AMAZING NEW AMSTRAD CPC 464!!

- Supplied with Database containing data on over 10,000 matches since 1980!
- You update the Database each week – but no tedious typing, as team and division names already in program!
- Errors easily corrected – the program even checks your entries!
- Comprehensive instruction manual and menu driven program – easy to use, even for a newcomer to computing!
- Will forecast the least likely draws for those who prefer to bet on fixed odds!
- Built in perm generator – complete your coupon direct from the screen!
- Fully microdrive compatible! (Spectadraw only).
- Compatible with Currah Microspeech – the first pools program to read you its predictions! (Spectadraw only).

Spectadraw 3 for the 48K Spectrum.....£9.95 inclusive
Amstra-Draw for the Amstrad CPC 464.....£9.95 inclusive
(Cheques/P.O.s payable to B. S. McALLEY)

We dispatch every Monday with the database made up to include all matches up to the date of dispatch.

SPECTADRAW (Dept DC), 1 Cowleaze, Chinnor, Oxford OX9 4TD. (Tel: 0844-52426)

dk'tronics
the games name

Now available for Spectrum, Commodore 64, Amstrad and MSX computers.

Open Forum

We are always actively seeking programs for publication — either for Open Forum, the machine pages or Star Game. When sending in a program for consideration, a clear program listing should be sent, together with, wherever possible, a saved copy on cassette. Documentation — usually not more than 1000 words — should start with a general description of the program, what it does, and then some detail of how the program itself is constructed. We pay very competitive rates, according to the length and nature of the program and the quality of the accompanying documentation.

Spider Attack

on Spectrum

The object of this game for the 48K Spectrum is to make your way through six levels of a multi-storey maze, collecting boxes of treasure on your way, and finally reaching a magic treasure chest.

Unfortunately your task is hampered by two man-eating spiders which patrol the maze. You carry a gun, but this can only stun them, and firing the gun uses up precious oxygen.

To escape from one level to the next you must simply make your way to the bottom right hand corner of the screen.

The controls are:

1 = move left
2 = move right
7 = shoot left
8 = shoot right
9 = jump left
0 = jump right

Baud Walk

Price war

The price war on modems — predicted in Baud Walk on several occasions — is now showing signs of hotting up with the arrival of the cheapest yet approved 300/300 unit and some price slashing going on in the multi-standard modem arena.

Enter Answercall, best known for their business activities in telecommunications — their *Minimo* modem shipped in from off-shore costs just £75.

The modem is very compact it's about half the size of a Spectrum — and comes with a power pack too. It has LCD to show when the line has been grabbed or dropped and all in all is a very neat package.

The drawback is that Answercall do not offer any software or recommend any software in the enclosed instructions. I would have thought this would have been a natural thing to do given that it's aimed at the home/hobbyist market as well as office automation uses — ie, hooked up to a word processor for telex.

In the multi-standard modem arena, Pace is currently offering its all-singing, all-dancing Nightingale for £136.85, the cheapest yet.

Nothing much appears to be stirring on the bulletin board front, but I know of at least one modem company which is planning to bring out bulletin board software to encourage growth of those types of dial-up databases.

About to break in a couple of weeks time is a Channel 4 advertising campaign from Micronet 800 who have been busily arranging demonstration centres so people can see the database before deciding to buy a modem and subscribe to the service.

I understand many Boots stores and some John Lewis and Spectrum Group stores will be offering this facility. If you already have a 1200/75 modem with viewdata software you could contact Freephone Prestel and arrange to see a demonstration database from the comfort of your armchair, so to speak.

And just a little snippet to keep you hanging on ... a major publishing company is about to announce an education network service offering electronic mail and data file exchange possibilities. I'm sure *PCW*'s intrepid reporting team will be at the official launch.

Robin Wilkinson

Baud Walk is a new weekly column with news on networking, databases, reviews of modems and software and points of contact for information.

Any readers with experience of networking are asked to send their experiences or news of services to Robin Wilkinson, Baud Walk *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

He can also be contacted on Prestel mailbox 019993727.

TOUCH-TYPE

FOR THE 48K Sinclair Spectrum

DO YOU YEARN TO DO SOMETHING *USEFUL* ON YOUR SPECTRUM?

Are you fed up with silly games? Make this the moment you take a step forward using your Spectrum into the world of **"The Office of the Future!"**

Learn to touch type on any QWERTY keyboard using the Spectrum as the teaching machine.

- ★ Full touch typing (no eyes down to the keyboard) from the first lesson.
- ★ Carefully designed lessons progress from key learning to speed practice at each stage.
- ★ Full ten finger touch typing with correct left and right shift key operation.
- ★ Learning psychology built in to the program to keep you motivated and interested in progressing.
- ★ Full feedback of performance — you know it is working — you *are* learning to type.
- ★ Learn at your own pace neither hurried nor restricted by other pupils.
- ★ Comprehensive instruction manual included with every cassette.

In this age of computers isn't it time YOU learned to type!

£8.95 inc p+p and VAT.

To: JCS Software, 1 Paddocks Close, Cobham, Surrey, KT11 2BD.
O.K. I'm ready to step forward and improve my ability. Please rush me a copy of TOUCH-TYPE for the 48K Spectrum. I enclose a cheque for £8.95 (Please make cheques payable to JCS Software).

Spider Attack
by S Inger

Arcade Avenue

Infinite lives

By the time you read this *Jetset Willy* will be making its, no doubt considerable, impact on the Commodore charts. I understand that it is also being transfered onto the Amstrad. Versions of *Manic Miner* are similarly being prepared for the BBC, Amstrad, Dragon and MSX which must be a huge relief for the non-Spectrum owning readers of this column that are wondering what all the fuss is about Miner Willy every few weeks. Even the Vic has its own 16K version of the *Perils of Willy*. Infinite lives pokes will be eligible once the games have been around for a while if you're happier hacking than playing games. (Incidentally I hope all you hackers are rushing to buy System 15000.)

Meanwhile amongst all this flurry of activity from Software Projects, Commodore owners should try to catch a glimpse of the game they licensed from American company Sierra Online — BC's *Quest For Tires*.

From what I've seen it has a disappointingly simple jump, dodge, rescue the helpless maiden plot, but the graphics are wonderful in that they capture almost exactly the nuances of the pictures of cartoonist Johnny Hart (no relation to Tony Hart) who writes the BC comic strip. His cartoons are packed full of inventiveness, humour and rich imagery and I am all for them being drawn upon to improve computer games.

Now on to the first couple of letters I have had about Ocean's *Decathlon*. From James Cockings of Sheffield comes this tip.

"I started to play this super game in reverse by trying to get the lowest distance I could on the discus. The man did a quarter turn and I threw the discus up at 36 degrees. The discus went up and up till it landed in the crowd and I got 186.86m." (I think you should have got 20 years!) "When I finished the game it restarted again where I left off with three athletes left — infinite lives!"

Still with Daley Thompson from Port Glasgow comes what appears to be a syndicate of athlete games players headed by J. J. Smith.

"My personal best for decathlon is 100 metres, 8.74s; long jump, 10.08m; shot put, 33.15m; high jump 2.38m; 400 metres, 27.42m; 110 metres hurdles 9.38s; pole vault, 5.04m; discus, 75.90m; javelin, 132.4m; 1500 metres, 268.11s. Total decathlon score was 716,690 with 493,465 scored on day two.

"On *Micro Olympics* by Database Publications our record scores are 100 metres, 8.04 — self; 200 metres, 16.12 — A. McIntyre and self; Javelin 102.48 m — G. Wilkinson and self; long jump, 9.5 — A. McIntyre, G. Wilkinson and self; high jump, 2.40 — self.

"My other high scores are *Halls of the Things* 726; *Invasion of the Body Snatchers* 4650; *Splat!* 14,855; *Penetrator* 78,430; *3D Ant Attack* 40,844; *Sabre Wulf* 179,000; *Chuckie Egg* 221,000; *Winged Warlords* 14,000 (which caused it to crash); *Full Throttle* 1st place."

Imagine the muscles that guy must have in his fingers!

Tony Kendle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Kendle, Arcade Avenue, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Spot check

Since computers have been around in amateur radio, they have mostly been put to use for logging and calculation purposes, as well as for transceiving existing modes of communications such as Morse or RTTY. Many people, myself included, have long argued that this was a waste of the available technology. What is needed is a new and more efficient mode or modes that use computer technology to provide faster, efficient and more comprehensive communication. This has been achieved in two ways. Firstly with *AMTOR* and secondly with the packet radio systems.

This week I shall concentrate on *AMTOR* and a new program for the Dragon which brings it within the range of the ordinary amateur. *AMTOR*, to put it very simply, is a highly sophisticated form of Radio Teletype which has handshaking protocols and extensive error checking. One of the great problems with RTTY in difficult conditions is whether the message has actually arrived at its destination. With *AMTOR*s error checking ability, this problem is solved.

AMTOR is an amateur version of an existing system which is used on marine frequencies for weather reports known as *NAVTEXT* and for commercial transmissions known as *TOR/SITOR*. Until now, it was quite difficult and expensive to get on the air with *AMTOR*. Thanks to the prolific radio software house Grosvenor Software, it is now possible to use *AMTOR* on the Dragon. If you have a conventional RTTY interface then only a 1KHz clock circuit is required in addition to the software. The clock and/or a full unit is available from PNP.

AMTOR on the Dragon supports three modes of communication, FEC which is like RTTY with less errors, ARQ which is the full *AMTOR* with handshaking and error detection/ corrction, and a mode called LISTEN which is a monitor mode. As usual with Grosvenors software there is full split screen operation, type ahead facility, ten user memories and the contact review facility.

A status line continuously displays vital mode and error information and there is a USOS (unshift on space) facility which means that the program always transmits the correct shift after spaces. As usual there is the 24 hour real time clock display which is instantly transmittable.

Dragon *AMTOR* is available on cassette for £39, on disc (Dragon DOS) for £44 and best of all, on *om* cartridge for £49. For people who wish only to listen in on *AMTOR* traffic, there is a receive only cassette at £24.

What I find fascinating is that Grosvenor are producing their programs on cartridge which means instant and safe use. They are now offering combinations of their programs in this form as follows: *AMTOR* + RTTY or *AMTOR* + Morse at £59 and *AMTOR* + RTTY + Morse at £69.

When you consider that the Grosvenor programs are probably the ultimate in amateur radio software and remember that the Dragon is retailing around £100 nowadays, then it is beginning to make sense to get a Dragon to use as a dedicated amateur terminal. The total cost with all the interfaces/terminal unit hardware involved is still under £200. Such a possibility was only a dream a year or two ago.

The Music Box

Sound synthesis

New products ready for the expected Christmas boom seem to be flooding in mercilessly. Don't worry if you haven't seen any of the goodies yet — this is the computer market, after all, and the practice of early announcement and late delivery has become a tradition.

Perhaps top of anybody's shopping list has to be the Yamaha CX5M. Don't be deceived — this isn't just any old MSX micro. The CX5M is an MSX micro plus what is effectively an entire digital synthesiser complete with keyboard, MIDI interface and Yamaha's DX7/9 hardware and software.

The DX7 and DX9 synths (which retail at around £1500 and £800 respectively) use a new form of sound synthesis based on frequency modulation. Previous systems have either attempted to reconstruct a sound wave numerically (direct synthesis) or have used analogue or digital oscillators, filters and envelope generators to produce a basic sound wave and then process it. FM synthesis uses the fact — long known — that when you combine two different sound waves by frequency modulation, the result will be a whole range of sound waves with different frequencies.

The technical details are elaborate, but the system is similar to the one by which VHF radio and the video part of television pictures are transmitted. Since the process is complicated, nobody thought to do it before Yamaha developed their YM2151 chip. The nearest thing to FM synthesis was the production of vibrato — the effect obtained when the frequency of a note varies slightly and rapidly. (It's worth experimenting with vibrato on your micro to see how some interesting effects can be obtained — all you have to do is rapidly change the frequency or pitch of a note in a regular fashion while it's playing.) Digital techniques have allowed Yamaha to develop a set of algorithms for FM which can be relatively simply understood by the non-expert.

The CX5M comes complete with an FM voicing program allowing you to control the YM2151 chip which is contained in a bolted-on unit under the main computer. You get a mini-keyboard too but it is very small and the CX5M MIDI doesn't allow you to run the computer from any MIDI keyboard, which is a great pity, especially since cheap MIDI keyboards are now becoming available (the £449 MK900 from Siel, to take a notable example).

Also unavailable is the Music Macro program which, like other CX5M software comes on cartridge (there's no disc-drive at present), and allows you to use the FM system from Basic. For those of us stuck in Basic without FM, the CX5M offers an AY-3-8910 standard MSX programmable sound generator, which is hardly compensation.

Still, at around £600 for the package, Yamaha seem to have come up with a winner.

Gary Herman

The Music Box is a new weekly column with news, reviews and readers comments on all aspects of micros and music.

Any readers with experience of computer music making or companies with new product news are invited to write to: drop a line explaining what they're doing to: Gary Herman, The Music Box, 12-13 Little Newport Street, London WC2R 3LD.

Open Forum

Days

on Spectrum

The Spectrum manual, on page 163, gives a program which converts a date to the right day of the week. This program, however only works for dates of the 20th century. The program below works for any date including other centuries. This is based on the formula V = A mod 7, where A = (2.6m − 0.2) + d + y (y/4) + (c/4) − 2c. *m* is the number of the month (Jan = 11 of the previous year, Feb = 12 of the previous year, Mar = 1, Apr = 2 and so on), *d* = day, *y* = year and *c* = (century − 1). By *A mod 7* we mean the remainder of A/7 which, in turn can be found by the formula A mod 7 = A − (7*(A/7)) where (A/7) is the integer part of A/7.

Program Notes

20-50	Set the introduction
60	Prompts input of date
70-150	Find value for Y(ear), M(onth), D(ay) and C(entury)
160	Sets value for A
170	Introduces formula
180-250	Finds and prints the right day of the week
260-270	Prompts for another try
280	Stop

```

Book Ends

Book Gateway to Computing Book 1 **Price** £4.95 **Micro** Commodore 64 (Spectrum, BBC, Dragon 32, Electron also available) **Supplier** Shiva Publishing Limited, 64 Welsh Row, Nantwich, Cheshire CW5 5ES

Ian Stewart's book is aimed at the young, absolute beginner and is one of three available in versions for a variety of micros.

This first volume introduces many of the major Basic commands, it emphasises the need for careful punctuation and other practicalities, and takes a quick look at the workings of the computer, all in a humorous, informal style.

It uses cartoons, diagrams and many small tests and examples to avoid being dry or daunting. It should provide a firm base for any youngster interested in doing more than zapping aliens; however, buying all three parts will prove a costly investment. Recommended, though.

John Minson

Book Commodore 64 Machine Code **Price** £6.95 **Micro** Commodore 64 **Supplier** Shiva Publishing Limited, 64 Welsh Row, Nantwich, Cheshire CW5 5ES

To fully exploit the potential of any computer you need machine code, but sadly it is a subject that can make even dedicated programmers quail.

Now Commodore 64 users have Ian Stewart and Robin Jones's excellent introduction to the subject. By breaking it down into byte-sized nibbles (sorry!) they have tamed most of its terrors.

Machine code is primarily concerned with careful manipulation of simple processes, and the authors illuminate the logic of these through many practical examples. Moving from binary and hex numbers to hi-res graphics, and including several hand-assembly aids, the book provides a painless grounding for anybody interested in communicating directly with their 64's CPU.

John Minson

Book *The Electron Puzzle Book* **Micro** Electron **Price** £6.95 **Supplier** Sigma Technical Press, 5 Alton Road, Wilmslow, Cheshire SK9 5DY

Written principally with the Electron in mind, this book nevertheless assumes a minimum working knowledge of BBC Basic. Through posing problems and offering alternative solutions, the book aims to develop the serious computer user's ability to solve puzzles and problems in a logical manner. New information is reinforced through a series of graded problems — each concerned with making words, numbers, sounds and graphics.

The book is written in a somewhat 'chatty' style. There are four chapters containing 50 problems with their solutions. All the puzzles require you to produce some result on the TV screen — simple words, random words and numbers, etc. Once these have been solved, the problems are made more complex when they are developed further with graphics and sounds. Not a book for beginners, but good for more serious programmers wanting to learn how to apply programming skills in an interesting and logical way.

Ian Waltham

TURBO CHARGE YOUR SPECTRUM

Outperforms any Spectrum interface

The unique Turbo interface from Ram gives you all these features – and more – in one unit:

- A variety of interfaces including: Rom cartridges, two 9-way D plugs for standard joysticks, PLUS full expansion bus at rear.
- Compatible with Kempston and Protek protocols.
- Works with latest Quickshot Mk II auto rapid-fire joysticks!
- Choice of Rom cartridge or tape cassette software.
- Instant program loading with cartridge software.
- Built-in power safety device – unique to Ram Turbo.
- Full one year guarantee.
- Immediate availability – 24 Hr despatch on receipt of P.O./credit card details (cheques – seven days).
- Incredible value – only £22.95.

So don't wait around – simply complete the coupon and send it to us today.

Or call our credit card hot line on 02514 25252. (Access and Visa welcome).

Ram Electronics (Fleet) Ltd, 106 Fleet Road, Fleet, Hampshire GU13 8PA.

24 Hr despatch for credit cards and postal orders

Please send me:

_____ Spectrum Turbo Interface(s) at £22.95 + £1 p+p (overseas orders £3 p+p)

_____ Quickshot II Joystick(s) at £9.95 (Only when purchased with Turbo – normally £12.95 + £1 p+p)

Introducing the latest QL QLassics...

APPLY IT, PROGRAM IT, MAKE IT THINK...

The three latest books on Sunshine's superb QL QLassics series are now available at your local bookshop or computer dealer. Let's take a look at the first one, Developing Applications on the Sinclair QL. It's full of practical ideas for making the most out of Quill, Easel, Abacus and Archive, for both your home and business. Ideal for both beginner and expert, Mike Grace's book gives you the knowledge you need.

Up till now, machine code programming on the powerful 68008 microprocessor of the QL was a daunting prospect. Andrew Pennell's QL QLassic, Assembly Language Programming, explains the internal structure, the register set and the many addressing modes – and includes the use of traps and exception handlers. Here are over 160 pages of vital data and advice for QL programmers, and all for just £7.95.

With the new Sunshine book, Artificial Intelligence on the QL, you can turn this already highly-capable machine into an intelligent micro. Your QL will be able to advise you, converse with you, learn from you – and even teach you a thing or two! This QL QLassic explains AI from first principles, and includes example programs and SuperBASIC programming. And all for only £6.95.

These three essential books for every committed QL owner are at your local bookshop or micro dealer now. Or use the direct order form here. And start applying your QL, programming your QL, and making your QL – and you – think, thanks to Sunshine's latest QL QLassics.

SUNSHINE

Look out for the Sunshine range at W H Smiths, Boots, John Menzies, other leading retail chains and at all good bookshops. Dealer Enquiries: 01-437 4343.

Order Form

To: Sunshine Books, 12-13 Little Newport Street, London WC2R 3LD.

Please send me the following book(s) for the Sinclair QL:

_____ copies of Developing Applications at £6.95 each

_____ copies of Assembly Language Programming at £7.95 each

_____ copies of Artifical Intelligence at £6.95 each

_____ copies of Quill, Easel, Archive & Abacus at £7.95 each

_____ copies of Introduction to Simulation Techniques at £6.95 each

Tony Bridge's Adventure Corner

Games without frontiers

One of the more amusing pastimes to which I treat myself occasionally, is reading the adverts in the Computer Press (without which . . .) — the prerequisite nowadays for a game to sell well would seem to be either the reward of a disgustingly huge cash prize, or the endorsement of some disgustingly healthy athlete (who has probably never been within five miles of a home computer!). If not one of these two, then the program is "The Official" version of some boring TV soap opera or horror film. Because of all this, software houses feel it natural to charge rather more than what used to be the norm for computer games. A price of £5 or so is, I think, not too steep — after that, beware! Programs such as *The Hobbit*, and *Elite* (the new spacezap-management-strategy-adventure for the BBC) are exceptions.

It comes as a nice surprise, then, to see a small band of software writers clinging to the pioneering spirit of a couple of years ago (remember when Bug-Byte and Quicksilva occupied little trestle tables and sold their software from cardboard shoe boxes?). When Gilsoft released *The Quill* a few months ago, I expressed the hope that programs written with it would stay in the lower price bracket — after all, the hard work has been done by Gilsoft.

The name of 8th Day Software cropped up not long ago in the Corner, and I am pleased to say that they have recently released a suite of six adventures, all written with the aid of *The Quill*, and all costing an incredible £1.75 each.

Like Scott Adams programs, the 8th Day products, which, incidentally, go under the collective name of Games without Frontiers, are graded in terms of difficulty. Thus, *Ice Station Zero* is a Beginners Game, *Cuddles, Quann Tulla* and *In Search of Angels* are moderately difficult, while only advanced adventurers should tackle *Four Minutes to Midnight* and *Faerie*.

As I've said before, titles are very important in attracting interest in an adventure, and these are guaranteed to grab the attention. The beginner's game *Ice Station Zero* is of the standard "get-everything-you-can-and-expore-as-much-as-possible" variety, in which you, the player, have to cross the Polar ice-cap in search of Stirling, an international terrorist. *Quann Tulla* places you in the shattered hull of a spaceship deep in space. Eventually, battling against robots and highly advanced computer systems, you are pitted against the might of an evil, corrupt Empire.

In Search of Angles is another James Bond-like romp, while *Cuddles* pitches you straight into the horrors of the nursery, from which you have to escape (lots of chances, here, to throw dishes of sloppy baby food around the place!). *Four Minutes to Midnight* is set in the devastation caused by a bacteriological disaster. Intriguingly, the player has to recruit five other characters to help in our eventual success. The other "Advanced" adventure in this collection is *Faerie*, which is a Midsummer Night's fantasy on the Spectrum, with all kinds of weird creatures, and hoards of fairy gold.

There are no fancy screen layouts, or redesigned character sets here — all the adventures are pretty workmanlike in their execution; all excellent value and guaranteed to give the keen adventurer, as well as the beginner, lots to think about. Each game starts off with an artfully-drawn title page to set the atmosphere (for example, *Quann Tulla* opens with a James Blish *City in Flight*) — unfortunately, the old spectre of The Spelling Mistake raises its head every so often. It beats me why, even in inexpensive software, someone isn't made responsible for checking *every* word.

Quann Tulla, as well as some of the others, displays one of the odd quirks which *The Quill* may be found guilty of, and which the lazy programmer falls foul of — the limited-move syndrome. In many *Quill'd* adventures, this takes the form of "so-many-moves-before-the-player-dies-of-hunger/thirst". This is fair enough, of course, but the anomaly comes after the player has solved this particular problem — it invariably doesn't arise again! Now, this has always struck me as rather silly — after all, if ten (or whatever) moves without food/water is enough to kill you off, why, after satisfying that hunger/thirst, should you then appear invulnerable during the rest of the adventure?

Anyway, the present adventure presents this problem as a requirement for the adventurer to discover how to survive in an airless environment — a certain number of moves are allowed before you die of oxygen starvation, and the same number of moves are required to discover the gas mask and put it on. As this little sequence is at the beginning of the game, you can very quickly start again, and gradually eliminate all the wrong moves.

Ice Station Zero is conducted in a similar way — once out of the tent at the start, you are shadowed by a pack of hungry wolves. Make the wrong move, and you are instantly set upon and killed off. The rest of the adventure, though, seems pretty logical (for example, you may take your gloves off when warm, but you must don them again once outside). A good beginner's game, with lots of atmosphere.

The others in the series are also pretty competent. *Faerie*, one of the Advanced games, is nicely laid-out, with little coloured hearts framing the location descriptions, and rather hard puzzles, too.

Overall, the series of Games Without Frontiers is well worth investigating, even though Eddie Waring himself doesn't get a mention, and despite the fact that the frequent spelling mistakes sometimes lead to the player having to actually mis-spell to make the program understand (as in "GET THE BROACH"!). The price excuses this sort of unfortunate lapse, and the atmosphere and logical puzzles in all the adventures makes up for any bad layout — after all, the whole series is still cheaper than some individual programs. And 8th Day provide a complete back-up service, with hint sheets and clues. (8th Day Software, 18 Flaxhill, Moreton, Wirral, Merseyside L46 7UH.)

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may able to help.

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Adventure ..... **on (micro)** .....

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

Boxed, with detailed instruction booklet

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available – 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture – choose as many selections as you need for your bet. The precise prediction formula can be set by the user – you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape, with simple instructions for conversion to disc/microdrive operation.

(This seasons results are supplied with the package so that predictions can start immediately.)

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, IBM pc

PRICE £15.00 (all inclusive)

NEW

FIXGEN 84/5

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)
Fixgen alone £5.50

COURSEWINNER V3
THE PUNTERS COMPUTER PROGRAM

Coursewinner is designed to allow you to develop and test your own unique winning system. Using information from daily newspapers or 'Sporting Life', the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), Dragon, Atari (48K), Apple II

PRICE £12.50 (all inclusive)

AVAILABLE (RETURN OF POST) FROM . . .

Put your micro to work, at home.

If you reckon there's more to your micro than playing games, but you're baffled by word processing and confused by spreadsheets, then take a good long read of Mike Grace's new book.

Home Applications on your micro cuts away all the confusion surrounding the ideas and ideals of the micro at home. It shows you the practical uses, with everyday examples that are within the reach of every micro owner. You'll discover how a database helps you with your domestic chores, and with your hobbies. You'll learn why word processing is worth your while, and how spreadsheets are tailormade for your personal finances.

This comprehensive, jargon-free book can help you to find out exactly how your micro can help you. Don't leave your home micro without one.

SUNSHINE

Look out for the Sunshine range at W H Smiths, Boots, John Menzies, other leading retail chains and all good bookshops. Dealer Enquiries: 01-437 4343.

Peek & Poke

Legal advice

P West of Scarborough, writes:

Q I am writing to ask you for legal advice. I am 15 years of age and my friend is almost 16. We have written several adventure games and are trying to sell them by buying cassettes, recording the tapes ourselves etc. However, we do not know how we stand legally to avoid other people copying our games and what licences or other things we would need to obtain. Could you help us?

A There are no real legal steps that you can take to protect your software. The law as it stands offers little protection. My advice would be to put copyright notices on any loading screens, and also to place copyright notices within your program code. Unless you can prove that someone has actually copied your code, there is no action you can take.

Screen in motion

Craig Lambie of Paisley, writes:

Q I own a Vic 20 and I was wondering why the whole screen moves when I type 9*16 ↑ 3,8+8.

Also, is there is a chess program available for the unexpanded Vic?

A Are you sure you did not type in *Poke*, etc? Location 36864 (9*16 ↑ 3) is one of the Vic screen pointers, so that is why the screen moves when you set it to 16 (8+8).

There does not appear to be a chess program for the unexpanded Vic at the moment, although I'm sure that some wide-awake software house will immediately set about writing one now.

Ace stockists

Paul Dunlop of Horsley, Glos., writes:

Q I am very interested in buying a Jupiter Ace and I have a few questions to ask.

Do any retailers still stock the Ace, if so how much?

How many Aces were made before Cantab went bust? What modifications meed to be made to a Sinclair 16K Ram pack to make it Ace compatible?

A Very few retailers still stock the Ace; you would find it much easier to buy one direct from Boldfield Electronics who now market the Ace. A 16K Ace will cost you around £50.

Sales figures are difficult to come by, but at least 20,000 must have been sold. The low cost of Ace add-ons makes it unprofitable to try and adapt existing Sinclair, or other bits and pieces.

Just a myth?

Lap Ki Kan of London, writes:

Q In one of your earlier issues, you revealed to us a device to allow CBM 64 users to run Spectrum programs. Please can you give me more information on it and its cost?

A The mysterious Spectrum emulator has not yet emerged into the sight of an eagerly waiting world and rumours abound as to whether it is just a myth.

From a technical standpoint the idea of being able to fit a Z80 emulator as *well* as a commercial Spectrum program into the Commodore 64 seems highly unlikely.

Just hype, I would suggest. Don't hold your breath.

Basic problem

William McCulloch of Bonnyrigg, Midlothian writes:

Q I have a Vic20 computer and have been programming in Basic for some time. When I use the Ram area at the top of the 16K expansion, user defined graphics characters do not work. I would be obliged if you could give me some advice on this matter.

A As I don't know what you are doing, or how you are trying to create your user defined characters, I can only suggest what might be going wrong. It seems most likely that you have forgotten to relocate the screen in Ram or to have moved the character set. Both these actions are performed by the following code:

```
POKE 648,30:POKE 642,32:
POKE 36869,240:POKE
36866,150:POKE 0,108:POKE 1,0:
POKE 2,192:SYS(0)
POKE 52,28:POKE 56,28:CLR
FOR i=7168 TO
7679:POKEi,PEEK(i+25600(:NEXTi
POKE 36869,255
```

If this does not cure your problem then write to me again with full details of what you are doing.

Cobol compiler

Geoff Haydock of Salford, writes:

Q I hope to be joining a course in Computer Studies shortly, during which I will be learning COBOL. I would like to purchase a COBOL compiler for my CBM 64, but have been unable to find one. I would be grateful if you could supply information of any available programs, together with the appropriate addresses and prices.

A COBOL for the CBM 64 . . . no problem . . . except the cost. You will need to run CP/M on your machine before you can run COBOL. This in itself is not that cheap. CIS COBOL is distributed by Microfocus, who can be contacted on Swindon 695891.

However, there is yet more bad news. You will need discs, of course, and a printer, but the worst news is that CIS COBOL costs £488.75. Bad news, eh? Unfortunately, that is the cheapest version available for the CP/M CBM 64.

On/off power

Ian Adey of Halifax, West Yorkshire, writes:

Q I would be grateful if you could tell me the *Poke* address which switches on/off power to the CN2 cassette on the Commodore 64.

A Memory location 1 is the I/O Port address byte and Bit 5 of this is the cassette motor control bit. If it is set on, the motor is turned off, if this bit is off the motor is turned on. Obvious really, isn't it?

The other bits in this byte are used for very important purposes, so they are best left untouched. So, to turn the motor on you could write (in Basic) *Poke 1, (Peek 1 and 251).*

To turn the motor off you would have to save the contents of address 1 and *Poke* the saved value back when you had finished with the cassette.

Price restriction

Paul Tang of Burton-on-Trent writes:

Q I am considering buying a modem, but am unsure as to which one to get. I am restricted to the ones under £100. Could you suggest one please? Could I get one in kit form for my BBC B?

A In the under £100 range, the Maplin Modem is probably your best bet. It comes in two forms: ready-made or as a kit — the choice is yours. You can contact Maplin on 0702-552941. Although the Maplin modem does not offer the same range of facilities as the more expensive varieties at £40 or so, it offers very good value for money to those just entering the world of computer communications.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Phil Rogers and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke, PCW*, 12-13 Little Newport Street, London WC2R 3LD

BASIC+ on microdrive
BASIC+ adds commands and appropriate error messages for structured programming, ie. Procedures, Repeat/Until loops, If...Then... Plus. Also graphic commands including a fast fill and utility commands including a renumber. Commands are entered by two key presses but appear in the program spelt out in full. BASIC+ loads in less than four seconds and occupies just over 1K of RAM and so is suitable for both the 16K and 48K Spectrum.
For a copy of BASIC+ and instruction booklet either send a blank cartridge and £4.95, or £9.90 only to the address below or send a SAE for further information.

PURCHASED A Commodore 64 but wishing you had bought a 48K Spectrum + books + magazines + over 60 strategy, arcade + simulation software + tape recorder. Swap for Commodore 64 or sell for £170 ono. 02509 61566.

WANTED SPECTRUM 48K or 16K cheapish. In the Anglia area. Phone (0604) 45658 ask for Mr Robert Haynes.

WANTED:- ANY information or software for the ZX80, especially required 16K Ram pack. Also for Vic-20, Thorn/EMI's "Pharoah's Curse", Terminal's "Rescue from Castle Dread" and Atarisoft's "Defender". (Urgent). 0558 822509.

SWAP COMMODORE 64, C2N, joystick, 7 books, 4 cartridges and 18 tapes for £450. Cost about £600. Tel: 0790 53161 after 4pm and ask for Jason.

SWAP MY Vic-20 + cash for CBM 64, plus joystick. Must be reasonable condition. Phone Phil 01-577-2083.

WANTED BBC model B with all lead Q s/w, £250 cash available. Tel: 01 504 5214.

WANTED CBM 3032 and 3040. Must be in good condition. Tel: Romford 46948.

WANTED ZX printer in good condition, pay up to £20. Tel: Mr Allen. 01-590 8301 after 6pm.

CBM 64 Q C2N + joystick + s/w, swap for BBC. Tel: (0249) 659866.

WANTED FELLOW MZ700 enthusiasts in North London to exchange ideas and give mutual help/advice. Phone 01-889 1090 evenings.

WANTED VERY poor unemployed Spectrum owner needs your unwanted ZX printer. Must be incredibly cheap (or free?!). Tel: (0752) 893121. Someone out there must be feeling generous today!

48K SPECTRUM Q s/w to swap for Atari 800. Tel: 0744 815076.

ADVENTURE HELPLINE

The Hulk on Spectrum. How do I get out of the dome? How can I reemove the ring and still stay as The Hulk? Stephen Douglas, 10 Hillside Close, Abotts Langley, Watford, Herts.

Knights Quest on Spectrum. How do I get past the vines in the forrest? Segn Devaney, 19 Gilbridge Road, Whalley Range, Mer 16.

McKenzie on Spectrum. How do I repair the jet-pack and the android? How do I get thej power pack? P M Brannigan, 11 Morningside View, West Derby, Liverpool.

Hobbit on Spectrum. I cannot get out of the elvin kings cellar. Daved Guthrie Jr, 4 County Houses, Easter Kintrae, Elgin Moray, Scotland.

Valhalla on Spectrum. How do I get Ofnir? Stuart Jones, 20 Diane Drive, Rhyl, Clwyd, N Wales.

Hobbit on Spectrum. I cannot get through the magic door, or kill the dragon, How do you get back home once you've killed it? Neil Putson, 16 Parkside, Ladgate Lane, Middlesborough, Cleveland.

Madniss and the Minotaur on Dragon. I can't find the mushrooms, on level 1 so I can't access the magic spells. Richard Iveson, the Cottage, Patrington, N Humberside.

Feasibility Experiment jon Commodore 64. Where is the wick for the lamp? What should I do with the dragon? Richard Blythe, 4Meriden Avenue, Garforth, Leeds, W Yorks.

224System 15000 on Commodore 64. I can't get started. I don't know what to do when the screen displays 'please instruct'. Set Cane, 39 Hy Regt RA, BFPO 16, W Germany.

Hobbit on Spectrum. I meed some help with getting past the bulbour eyes on the way back. Stephen Jeffries, 14 Preston House, Paddock, Walsall, W Midlands.

Twin Kingsom Valley on BBC. How do you get the master key off the dragon in the north tower? Bruce Robertson, c/o Sgt Robertson, J 189, 31 PC Sqn RE, BFPO 35.

Snowball on Spectrum. Can anyone tell me how to use the lift and get somewhere? Please! Conn Iggulden, 50 Elmj Avenue, Eastcote, Ruislip, Middx.

Mounatins of Ket on Spectrum. How do you crossd the stream? How do you form a stable relationship with the horse?? Brian Diggie, 12 West Park Avenue, Leeds LS8.

Hobbit on Oric. Afdter escaping from the govlins dungeon, how do I avoid being recaptured and where is the ring? David Wain, 38 Coleraine Road, Great Barr, Birmingham B42.

224Knights Quest on Spectrum. How do I rescue the dwarf and then get iast the dragon? Help! Conn Iggulden, 50 Elm jJAvenue, EAstcote, Ruislip, Middx.

Twin Kingdom valley on Commodore 64. How do I get through the crackj on the sand slope near watersmeet? Marin Hodges, 52 Granville Drive, Kingswinford, West Midlands.

Twin Kingdom Valley on BBC. When you get the uniform jout of the guard's room, what use is it to you? Can yor get into the armoury? If so, how? Glen Sugden, 25 Tredegar Road, Emmer Green, Reading, Berks.

Espionage Island on Spectrum. What use are the jlanding lights? How do you get past the tand? J Gaffney, 57 Portland Crescent, Barrow-in-Furmess, Cumbria.

Gems of Stradus on Amstrad. How do you get over the jpit? How do you pass the guard? A Byrne, 190 North Gower Street, London NW1.

Urban Upstart on Soectrum. How do I get past the football fan? What jis the noise at the back of the fish shop? Where is the plane? Adam Buckle, 188 Barnsley Road, Cudworth, nr Barnsley, s Yorks.

Ring of Power on Commodore 64. How do I pass the pirate? How do I read the notes in the milk bottle? Mrs P A Taylor, 167 Uplands Road, West Moors, Wimborne, Dorset.

Quest Adventure on Commodore 64. How do I get the jewel encrusted sword and mace? Mrs P A Taylor, Uplands Road, West Moors, Wimbourne, Dorset.

Espionage Island on Spectrum. Can anyone helpjme find the combination for the safe? Stephen Howard, 69 Cranbourne Road, Northwood, Middx.

Hobbit on Commodore 64. How do I get across the black river in the wooden boat? Nigel Davies, 19 Parc Lane, Groes-Faen, nr Pontyclun, Mid-Glam, Wales.

Ship of Doom on Spectrum. How do I get the key from the glass? Andrew Gibson, 18 King's Meadow Road, Colchester, Essex.

Fantasia Diamond on Spectrum. I have got into the fortress via the broken window and I cannot get any further because of the guardian, E Dubro, 43 Adelaide Drive, Colchester, Essex.

Voodoo Castle on Vic20. How do I remove the animal heads? And how do I remove the boards in the chimney? Charles Wade, 93 Mayfield Avenue, Grove, Wantage, Oxon.

Adventureland on vic20. Where do I find the container to put the gas in? How do you kill the dragon without waking it? John Irvine, 51 Alma Road, Enfield, Middx.

Ship of Doom on Spectrum. How do you take the cover off the key? Stephen stupple, 65 Douglas Buildings, Marshalsea Road, London SE1.

Feasibility Experiment on Spectrum. I have five treanures and a working lamp. How do I get past the display caninet guard? Can I do anythinbg withe the dragon/lion/emperor and gladiator except kill them? How do I open the door down the mine? Marcus Groan, 15 Cuofton Street, Rusholme, Manchester. PS I can help anyone having problems with Snowball.

New Releases

NO FRILLS

Drelbs is the latest American import to be launched on the discerning Great British Public by US Gold, who so recently brought us the official version of *Zaxxon*.

Originally produced by Synapse — one of the top US houses — it is an excellent little game, drawing on, but not plagiarising, several arcade themes.

It consists of two main screens. The first is a swivelling maze, as in *Ladybug*, in which you, a drelb, must create squares whilst being pursued by two different sorts of nasty. This is fun. The squares change colour, and are now solid.

When you have made all the squares you can, they start changing into nasty faces . . . all except one, which is a door into the next screen. Here you rescue all your frozen Drelb brethren by tagging them, avoiding being zapped by new nasties. Success takes you back to the first screen, but harder. Few frills, just pretty good.

So why is US Gold's other Synapse title *Fort Apocalypse* so utterly abysmal?

Program	*Drelbs*
Price	*£8.95(C) £12.95(D)*
Micro	*CBM 64 & Atari 32K*
Supplier	*US Gold* *Unit 10* *Parkway Ind Centre* *Heneage Street* *Birmingham B7*

STRAY DNA

As we all know, being the last surviving member of your race is something of a trial. For a start, there's never anyone around to drive you home after a heavy session down the pub. It also takes a hell of a long time to get served.

Still, as far as I am concerned, it is no excuse to go wandering around a 4096-room complex collecting orbs and stray bits of DNA, dressed in a one-piece yellow jump-suit. Is this the reason that apparitions (formed from pure energy) are out to get you? Nevertheless Xavior has been set the task of resurrecting the human race.

Well implemented and designed this PSS game may be, but it does seem to owe something (well quite a lot, really) to that well known hit — *Atic Atac*.

I shall carry on waiting for *Swords and Sorcery*.

Program	*Xavior*
Price	*£5.95*
Micro	*Spectrum 48K*
Supplier	*PSS* *482 Stoney Stanton Rd* *Coventry* *CV6 5DG*

DISPLAYED

The Soft Sell is a programming utility which enables you to construct advertising sequences and announcements to run on a Dragon. A total of 17 graphic displays can be sequenced together to create the kind of display used in window fronts, etc.

There is an extensive manual with the program which even covers things like plugging in the computer. Actually creating the text and designs is a matter of using cursor keys to trace an outline and other keys to add colour and copy one part of the screen to another.

It's pretty easy to use and I suppose may be a boon to shopkeepers everywhere. I can't help wondering why it's for the Dragon which has amongst the worst graphics of any home micro. It's also pretty expensive at £17.25.

Program	*The Soft Sell*
Price	*£17.25*
Micro	*Dragon*
Supplier	*Micro Sign* *P.O. Box 60* *Woking* *Surrey*

VOCAB TEST

Kosmos have been issuing language teaching programs for a while now and is one of the few companies that has a Spanish

tutorial program. *The Spanish Tutor* has recently been released for the Commodore 64.

All the programs use a simple tutorial program to teach basic keyboard familiarity and have facilities for you to add your own grammar and vocabulary. Pre-recorded lessons include basic vocab, verb conjunctions, prepositions and complete phrases. The language can also be tested in a variety of ways. The course is divided over two tapes which have an awfully silly Spanish man on the cassette cover.

Program	*The Spanish Tutor*
Price	*£8.95*
Micro	*Spectrum*
Supplier	*Kosmos* *1 Pilgrims Close* *Harlington* *Dunstable* *Beds*

New Releases

FLAGSHIP

With one exception, support for the Oric/Atmos would seem to have dried up. The exception is a French company called No Man's Land whose products are now available in this

country. *Tyrann* is probably the flagship of its range — it's an adventure with graphics in the Dungeons and Dragons style.

To begin you choose your character — Warrior, Thief, Druid or Magician — each has its own strengths and weaknesses. You then move around the village of Golanaur which is displayed in line drawn pictures with simple perspective.

You may trade, be forced to fight, use some objects and save games and characters for later use. You get a nice manual and at £8.95 the program is not overpriced by Oric standards. Good news for drought hit Oric/Atmos owners.

Program	*Tyrann*
Price	*£8.95*
Micro	*Oric/Atmos*
Supplier	*No Man's Land* *High Tech Units* *1 and 2 Conlon* *Developments* *Water Lane* *Darwen* *Lancs*

UNDERGROUND

Interceptor produce well written, fun games that really only ever have one major failing — they are never original. The latest Commodore release is a case in point. *Quango* is a game in which you burrow around underground chased by robots as you try to encourage your mushrooms to grow. Kill the robots by digging the ground from underneath stones which then fall on them — remind you of something? Yes, it's *Dig Dug* in a new guise.

Not that it's a bad game, unlike *Manic Miner* there aren't that many versions of *Dig Dug* around. Consequently as a game it hasn't become that wearisome. Angus (you) dodges robots and strange weeds whilst making his way towards the centre of each cavern.

There are various caves, as you get deeper and deeper so underground streams slowly flood the passages, making it more difficult for Angus to harvest his crop of mushrooms. Quite fun if unspectacular.

Program	*Quango*
Price	*£7.00*
Micro	*Commodore 64*
Supplier	*Interceptor Micros* *Lindon House* *The Green* *Tadley* *Hants*

SKYSCRAPER

Plummet is one of a growing range of Spectrum games from Interceptor and it's actually pretty good. The idea is to rescue the mayor who is stuck in a lift. Why a mayor? I know not.

His salvation comes when you — Orson — collect enough ropes to tie the line securely to its supporting chain. The game is played over three screens forming a giant skyscraper. Orson collects ropes scattered about the screen, dodges a variety of irrelevant objects and makes his way to the lift.

There is a Zombie Doorman who appears and disappears and whom you can stun with a tranquiliser dart — the game may be basically only dodge and grab, but there's enough different about it to make it interesting for at least a couple of minutes. The graphics are large and sprite-like, but they suffer from the inevitable colour change when they pass one another.

Program	*Plummet*
Price	*£7*
Micro	*Spectrum*
Supplier	*Interceptor Micros* *Lindon House* *The Green* *Tadley* *Hants*

NEW COMMANDS

The Commodore 64 has terrible Basic. This is a fact accepted through the great passages of time as immutable and certain. To improve this situation, there have been a great number of extensions to Basic beginning with Simon's Basic and continuing every other month with another one from someone else.

Possibly the definitive extension to Basic will prove to be *Breden's Basic* written by Visions and marketed by CSM. It is beautifully packaged in a fold-out wallet, one side containing the cassette and disc and the other contains the large, Spectrum manual type book which explains how to use the new commands.

Obviously the bulk of the new commands are concerned with sound and graphics; eg, EMOB to turn on a sprite, Envelope simplifies the sound command.

It doesn't end there, though, you get useful structured basic commands like While... Do...Else and Repeat...Until and commands like CBit to clear a specific bit. If you are into programming, own a Commodore 64 and have a spare £39.95, then this is for you.

NO MISTAKE

Gener 80 is a sophisticated editor-assembler for the Spectrum which does amazing things.

The source code is processed immediately so that syntax mistakes are immediately spotted — the program can assemble 3000 lines in under 10 seconds.

You can edit anywhere on screen, use block move and delete, use all standard Z80 mnemonics and even use Sinclair system variable names as labels. All code can be saved either to tape or microdrive — *Gener 80* itself can also be saved to microdrive from the original cassette.

Obviously not intended for beginners, the program nevertheless comes with a 32-page manual which is pretty good and quite helpful, even for the novice.

Program *Gener 80*
Price *£7.95*
Micro *Spectrum*
Supplier *Seven Stars*
15 Gloucester Avenue
London NW1 7AU

PULSATING

Skyline Attack from Century Software is pretty much your classic blam blam stuff which only has a reason for its existence if you don't already have

something similar.

Basically, it's *Defender* as you move your highly manoeuvrable jet back and forth across scrolling screens and blast everything in sight, except canisters of medical supplies that occasionally drop from the sky.

It's all reactions, screen fulls of pulsating aliens — the only new feature is that it takes place over a number of recognisable skylines like Paris and London. If you've just bought your Commodore and don't have anything to kill yet, then this is for you. If not, forget it.

Program *Skyline Attack*
Price *£7.95*
Micro *Commodore 64*
Supplier *Century Publishing*
Portland House
12-13 Greek Street
London W1V 5LE

RETRIEVED

A potentially useful utility from a company called Lost n Found Software is *Get it Back*, a disc-based program that can retrieve lost files.

What this and similar systems allow is the retrieval of information on disc which appeared to have been lost through disc damage and have resulted in error messages when you attempted to load them.

Obviously you can't get everything back if you have completely wiped information from a disc and put something new on it — rather it's intended for those cases where you know that the stuff is still there, but just can't seem to get to it.

How the program works I know not — probably it just searches through the disc, loading up what data it can find and ignoring errors. Seems like it's a program worth having anyway. It's easy to use too.

Program *Get it Back*
Price *£6.99*
Micro *Commodore 64*
Supplier *Lost n Found*
17 Pitfield Street
London N1

FULL HOUSE

Fancy playing *Bingo* on your micro? No, I don't either. Still, if you feel you've been missing out by being too old to subscribe to the *Sun* and you've lost your *Times* Portfolio card, you could at least win REAL MONEY on *Bingo* from Tynesoft.

Up to four people can play the computer and beyond saying that it plays Bingo, there's not much comment I can make. However, every time someone wins the last four numbers called are compared with four 'lucky numbers' at the bottom of the screen. If the numbers match then you go into the draw for £100. You prove this by saving it to tape.

If you have a Currah speech synthesizer then the program will actually shout the numbers out.

Personally, I don't like *Bingo* and will be putting my X in the box for no publicity.

Program *Bingo*
Price *£5.95*
Micro *Spectrum*
Supplier *Tynesoft*

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Grown-up's MSX

The latest news is that the CP/M disc operating system is to be implemented on the QL. Not only that but Amstrad will be providing it as an integral part of their disc system. Even the ever-receding Enterprise offers amongst its specifications CP/M compatability.

Further confirmation that home micros are rapidly crossing the divide into the heady world of small business systems and 'serious software'. If you can control your feverish excitement for a second let's stop and think about what CP/M is, and what is can do — I believe that for 95% of people it is going to be an overblown waste of time.

The idea of CP/M came about as an attempt by Digital Research to overcome the continuing problems of non-compatability between different hardware systems, and avoid prolonged and unnecessary duplication of effort in software development. In short, it is a sort of grown-up's MSX.

Despite its undoubted success I feel there are several prevalent misconceptions about what CP/M can offer that need clearing up.

The most commonly quoted justification for it's existence is that it allows software compatability between different computers and gives access to a back-catalogue of over 3000 programs. Unfortunately this is only true up to a point. Whilst the major headaches of software redesign and debugging that accompany a conversion from say the Spectrum to the CBM 64 can be avoided, you will not be able to go out and buy any old CP/M program and run it on your micro. No machines can be completely software compatible without the rigid internal architecture and Rom constraints that characterise the MSX machines or the more 'highly compatible' IBM clones.

What this means is that you will only have access to the fraction of the 3000 CP/M titles that Amstrad, Enterprise or anyone else decide to convert, unless you fancy doing the job yourself. Only the mainstream big-selling programs are likely to make an appearance.

The other by question about CP/M is, how many of the fraction of the 3,000 programs which are converted will you actually want? The biggest barrier I can see for most people is the price. For instance the *Wordstar*, word processing package which must be the single biggest seller for CP/M still changes hands at the whopping price of £250 — more than most home hardware systems cost!

When you consider how many people make do with their versions of *Tasword*, or *Easiscript*, is it really worth paying ten to twenty times as much for something that, after extensive use, I can assure you is still a fairly average word processor?

As I understand it, some professional business software writers regard CP/M as having been a positive hindrance to the development of quality software by encouraging a lowest common denominator approach.

In particular 16 and 32-bit 'wonder micros' have been forced to develop a pseudo CP/M standard of their own to satisfy business users who are keen to keep the software they are familiar with and want to avoid the probelms of re-entering data files etc.

CP/M is becoming a bottom-line standard perpetuating old technology in a way that many fear MSX will do.

In contrast, the chaotic non-standard home computer scene has seen the arrival of software that has squeezed the very last drop out of the capabilities of the hardware — just look at some of the Spectrum programs comming out now.

People who are forced to run CP/M on their QL because of a shortage of software should feel cheated — the evolution to 16-bit (or is it 32?) has been phenomenally fast so why slam the brakes on now and start getting involved with an 8-bit standard?

As CP/M begins to look more and more arthritic to business users, Digital Research will no doubt be delighted to see a new market opening up for in the low-end home computer sector.

Nevertheless, from Amstrad's point of view CP/M probably didn't look like such a bad idea.

After all, if you can find everything you need for your work on popular CP/M discs, why not run them on the best value hardware you can find? Besides which, it plays games as well.

Tony Kendle

Leaf it out

Puzzle No 132

As is my usual practice when packing for the summer holidays, I always include an ample supply of reading matter in case of wet weather. There were a number of books that I had put ready, and these are listed below (the figures in brackets after each title indicate the number of pages in the edition that I had).

1) The Rubaiyat of Omar Khyaam ..... (64)
2) Twelfth Night by William Shakespeare .... (89)
3) The Shorter Poems of Wordsworth ..... (107)
4) Tom Brown's Schooldays by Thomas Hughes ..... (111)
5) Pygmalion by G. B. Shaw ..... (147)
6) Wuthering Heights by Emily Bronte ..... (168)
7) Sleeping Murder by Agatha Christie ..... (175)
8) The Pickwick Papers by Charles Dickens ..... (192)
9) 1984 by George Orwell ..... (204)
10) War and Peace by Leo Tolstoy ..... (241)

I am bound to say that this was the cause of some disagreement between my wife and I, who felt that ten books was somewhat excessive. As a compromise, I chose just five of the books, but even so, these provided me with a total of 800 pages.

Which books did I take?

Solution to Puzzle No 127

The total distance ran was 290582 paces.

The program examines each integer from 1 to 1000 to see if it is a multiple of seven or 13 or to see if it contains any of the digits seven, one or three. Only if neither of these conditions apply is twice this distance added to the total (to account for the return journey).

```
10 LET DISTANCE = 20 FOR N = 1 TO 1000 30 IF N/7 = INT(N/7) OR N/13 = INT (N/13) THEN GOTO 100 40 N$ = STR$(N) 50 FOR F = 2 TO LEN (N$) 60 Z$ = MID$(N$,F,1) 70 IF Z$ = "7" OR Z$ = "1" OR Z$ = "3" THEN GOTO 100 80 NEXT F 90 DISTANCE = DISTANCE +(N*2) 100 NEXT N 110 PRINT DISTANCE
```

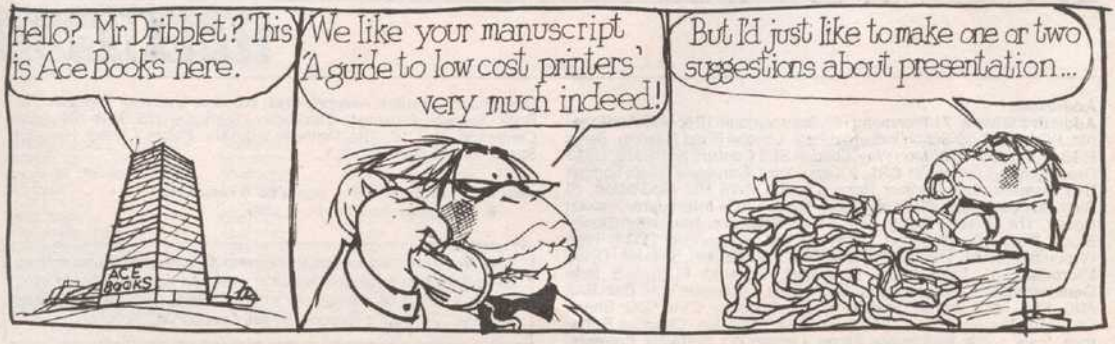
Winner of Puzzle No 127

The winner is B. A. Kidd of Holsworthy, Devon, who receives £10.

Rules

If the puzzle prize can be sensibly solved using a computer, then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle No 132 is November 23.

The Hackers



You'll never dream a program could be this good!!!

HOW TO PLAY 'THE PI IS CAST': FIRST, IF PERMITTED SCISSORS, CUT OUT COUNTERS & DIE DISC. INSERT DUD MATCH THROUGH HOLE 'A' OF DISC (HOLE 'B' FOR 'LOADED' VERSION). PASTE THE LOT ONTO THIN CARD. NOTE THAT DIE IS UNUSUAL IN NUMBERING. FOR 'π' SYMBOL, SUBSTITUTE OWN AGE, BUT IF YOU GO PAST '40', CONTINUE COUNTING FROM SQUARE ONE.

CUT OUT THE DISCS AND PASTE ONTO CARD.

IF EGOCENTRIC, USE SMALL ROUND PHOTO OF SELF.
